**Revised Version  
October, 2000**

**Addendum**  
*Revisions to O\*NET Data Collection Instruments*  
October 2000

Below is information regarding important updates to the project described in the report, *Revisions to O\*NET Data Collection Instruments, Revised Version, October 2000*.

- G** This report contains information based on O\*NET 98 and refers to information presented in O\*NET 98. Since the publication of this report, the O\*NET 3.0 database has been developed. The major difference between this database and the O\*NET 98 database is its compatibility with the 1998 Standard Occupational Classification (SOC) System.<sup>1</sup> By making O\*NET 3.0 compatible with the SOC system, the O\*NET 3.0 database contains 974 occupations. O\*NET 98 contains 1,122 occupations. Note, the Office of Management and Budget has mandated that all federal agencies' occupational classification systems be compatible with the 1998 SOC system.
  
- G** Specific modifications made to prototype data collection instruments that resulted in the updated questionnaires<sup>2</sup> are described in this report. The modified questionnaires were used in the O\*NET Pretest Data Collection, and the same version will be used in future O\*NET data collection efforts. However, it is important to note that the modifications to the questionnaires described in this report are not yet reflected in the database structure of O\*NET 3.0. These questionnaire modifications will be incorporated into the next version of O\*NET 3.0.
  
- G** O\*NET 3.0 and O\*NET OnLine, a web-based application that allows users to view and use the O\*NET 3.0 database, can be accessed via the website, [www.onetcenter.org](http://www.onetcenter.org)

<sup>1</sup> United States Department of Labor, Bureau of Labor Statistics. (1999). *Revising the Standard Occupational Classification System*: Washington, DC: Author.

<sup>2</sup> The *O\*NET Data Collection Program* currently uses five questionnaires in data collection: Skills, Knowledges (which includes education, training and work style questions), Abilities, Generalized Work Activities, and Work Context.

## **Acknowledgments**

The O\*NET project was produced and funded by the U.S. Department of Labor, Employment and Training Administration, Office of Policy and Research under the direction of Gerard F. Fiala, Administrator. The O\*NET project is directed by Jim Woods, Office of Policy and Research and Donna Dye, Office of Workforce Security.

The Revision of O\*NET Data Collection Instruments was directed by Rodney McCloy of the Human Resources Research Organization (HumRRO). This report is the result of collaboration by Rodney McCloy, John P. Campbell at HumRRO, Michael Hubbard at Research Triangle Institute (RTI), and John Nottingham, Phil Lewis, David Rivkin, and Jonathan Levine at the National Center for O\*NET Development. Special thanks are given to Steve Atkins at the National Center for O\*NET Development for his guidance in the preparation of this report, and to Ron Boese and Jerry Pickett at the National Center for O\*NET Development for their editorial contributions. Special thanks are also given to Pat Parker and Suzanne McDonald at RTI, and to Brenda Dunn at the National Center for O\*NET Development, for their assistance in the word-processing of the manuscript and preparation of the Appendices.

## Executive Summary

The *Occupational Information Network (O\*NET)* is a database describing the characteristics of workers and jobs. It contains information on 1,122 occupations. O\*NET was designed to replace the *Dictionary of Occupational Titles (DOT)*. O\*NET is the most comprehensive standard source of occupational information in the United States. O\*NET will be at the center of an extensive network of occupational information used by a wide range of audiences, from individuals making career decisions, to public agencies and schools making training investment decisions, to employers making job structure and hiring decisions. O\*NET will also be widely used for administration of federal programs, including employment, training and education programs of the Departments of Labor, Health and Human Services, and Education.

Information presented in O\*NET is based on the O\*NET Content Model (Peterson, Mumford, Borman, Jeanneret, & Fleishman, 1995). This content model covers six domains of job characteristics. Jobs can be described either by the demands placed on people doing the work (domains of Worker Characteristics, Worker Requirements, and Experience Requirements) or by the work being done (domains of Occupational Requirements, Job-Specific Requirements and Occupation characteristics). The data in O\*NET describe each domain exhaustively. The data will be kept up-to-date by means of an extensive data collection program.

The O\*NET data collection program uses a two-stage sample design, including a statistical sample of businesses and a sample of workers in selected occupations within the sampled businesses. These 'incumbent workers' are asked to complete the survey instruments which measure the job characteristics specified by the Content Model. The data collection program is a continuing activity to develop and maintain current job-related information. This information is crucial to the validity of O\*NET.

In the initial field tests using prototype versions of the O\*NET survey instruments, the response rates for incumbent workers were low. The O\*NET Instrument Revision Working Group was convened to revise the prototype instruments in ways that would lead to improved survey response rates. The research reported here is an implementation of a philosophy of continuous improvement that has been adopted as an operational philosophy for all subsequent O\*NET development.

This report is a summary of the methods and results of the Instrument Revision Working Group's modification of the prototype instruments. It describes:

- the cognitive methods used to evaluate the prototype instruments;
- the results of the cognitive evaluation of the prototype questionnaires. (The evaluation indicated that the questions were difficult to understand and answer, placing an unnecessary burden on respondents);
- the modifications in the design of those questionnaires made as a result of the evaluations. (The design modifications simplified the instructions and questionnaire items without altering their content);
- the revisions in the content of the prototype questionnaires. (The content revisions involve 1) reductions in the number of items, 2) reductions in the number of response scales per item, and 3) minor wording changes to specific variable definitions);
- the results of a brief laboratory pilot test of the revised instruments.

# Chapter 1. Introduction

## Historical Background

The *Occupational Information Network (O\*NET)* is a new product, developed by the U.S. Department of Labor. It is designed to replace the obsolete *Dictionary of Occupational Titles (DOT)* and to provide additional information not previously available in the *DOT*. O\*NET uses a new data structure, the Content Model, to conceptually organize occupational information, moving from the *DOT*'s over 12,000 occupations to a more manageable 974 occupations based on the *1998 Standard Occupational Classification*. O\*NET's features, coupled with these compatibilities, provide a "common language" of standardized descriptors and measures about jobs for use by a variety of audiences interested in occupational information.

## O\*NET Content Model

The substantive domains that are to comprise the O\*NET data base of occupational information were specified by the Advisory Panel for the Dictionary of Occupational Titles (APDOT, 1993). APDOT envisioned O\*NET as comprehensively integrating all major types of occupational information in a systematic way. Thus, O\*NET is a comprehensive database system for collecting, organizing, describing and disseminating information on job characteristics and worker attributes.

The O\*NET system is based upon the O\*NET Content Model (Peterson, Mumford, Borman, Jeanneret, & Fleishman, 1995). The Content Model underlying O\*NET organizes job-related information into four types of cross-job descriptors:

- ***Worker Characteristics*** — abilities, interests, and work styles;
- ***Worker Requirements*** — basic skills, cross-functional skills, general knowledge and education;
- ***Experience Requirements*** — licensing, experience and training, and job-entry requirements for basic and cross-functional skills;
- ***Occupational Requirements*** — generalized work activities, organizational context, and work context.

Each domain of the Content Model contains a hierarchical structure used to group specific detailed information. For example, the *Worker Characteristics* domain contains three types of information: *Abilities*, *Interests* and *Work Styles*. *Abilities*, in turn, contains four types of

abilities, *Cognitive, Psychomotor, Physical and Sensory*. Each of these types of abilities contains further levels of detail. For example, Psychomotor abilities include *Fine Manipulative, Control Movement*, and *Reaction Time and Speed* abilities. Finally, Fine Manipulative Psychomotor Abilities contain three specific descriptors: *Arm-Hand Steadiness, Manual Dexterity*, and *Finger Dexterity*.

In addition to cross-job descriptors, the Content Model also includes:

- ***Occupation Specific Information*** — tasks that are particular to a specific occupation; and
- ***Labor Market Characteristics*** — such as pay and job openings.

The instruments used for O\*NET development are designed to measure the various domains of the Content Model<sup>1</sup>. Information for the model domains is collected by a series of questionnaires completed by job incumbents. Respondents to O\*NET data collections are guided through a series of questionnaires designed to solicit ratings of jobs or workers represented by each element:

- ***Worker Characteristics*** are measured using the *Abilities* and *Work Styles* questionnaires;
- ***Worker Requirements*** are measured using the *Skills* and *Knowledges* questionnaires;
- ***Experience Requirements*** are measured using the *Training, Education, Licensure, and Experience* questionnaire;
- ***Occupational Requirements*** are measured using the *Generalized Work Activities* questionnaire, and the *Work Context* questionnaire;
- ***Occupation Specific Requirements*** are not measured using questionnaires, but are measured by job analyst observations, job holder and supervisor descriptions elicited in group discussions, and task inventories;
- ***Occupation Characteristics*** are also not measured using questionnaires, but are provided by linkages to other databases produced by the Bureau of Labor Statistics and its cooperating state employment security agencies, the National Occupational Information Coordinating Committee, the U.S. Department of Education, the Office of Personnel Management, and others.

---

<sup>1</sup> Due to federal government data collection authority, response burden concerns, resource constraints, etc., not all portions of the Content Model (or associated questionnaires) are to be applied within every fiscal year.

## Prototype O\*NET Measures

The prototype O\*NET questionnaires used several types of rating scales, depending on the element being measured. Most were scales for measuring Frequency, Importance, Level, or Agreement. For example, the prototype Generalized Work Activities Questionnaire elements were rated according to Level, Importance, and Frequency.

The prototype instruments have been used in three data collections:

- In the first, pilot test versions of the instruments were administered across the country to small opportunity samples at five employment service offices. Respondents were locally employed adults who volunteered to attend the sessions. The aggregate sample consisted of 209 people sampled from 20 occupations. A structured questionnaire with some open ended items was used to solicit evaluative comments about the instruments.
- In the second data collection, a mail-out survey obtained ratings on the O\*NET descriptors for all domains from 15 job incumbents in each of 80 occupations. It was this survey that yielded a low return rate.
- In the third, data collection consisted of having occupational analysts rate each of the O\*NET occupations on selected O\*NET variables. Each occupation was rated on the basis of a definition and written task description that consisted of a representative set of job tasks (taken from the DOT codes that comprise that occupational unit).

The prototype O\*NET measuring instruments were developed over a relatively short period of time. Each instrument was produced by a domain research team that surveyed the available literature and generated a taxonomy of variables that, in their judgment, best represented and synthesized the possibilities presented by the literature. The previous literature varied from extensive, in the case of “abilities” (e.g., Fleishman, 1992; Carroll, 1993), to minimal, in the case of “skills” (e.g., see Lubinski and Dawis, 1992). The decision to include and characterize constructs or variables involved some subjective decisions based on these literatures (Peterson et al, 1995; Mumford, Sager, Childs, & Whetzel, 1995; Peterson, 1997). In other words, in many instances the domain teams had to make a reasoned choice about what to include or not to include, given a lack of clear guidance from the literature.

It is for such reasons that neither the prototype model, nor the instruments developed to measure it, was viewed as the final answer. The expectation by the prototype development team was that there would be several stages of revision and improvement (Peterson et al., 1995). Such revisions and improvements would be driven by technical and scientific advances, by economic and evolutionary forces in the labor market, and by taking advantage of opportunities for improvement that arise as part of the operation of the O\*NET system. Consequently, continuous improvement has been adopted as an operational philosophy for all subsequent O\*NET development.

## Revision of the Prototype Measures

Based on the initial assessment of the prototype instruments, and on the philosophy of continuous improvement for O\*NET, the present efforts to revise the instruments were undertaken. The remainder of this report describes the methods and results of these revisions. **Chapter 2** describes the cognitive methods used to evaluate the prototype instruments. **Chapter 3** reports the results of the cognitive evaluation of the prototype questionnaires and describes the modifications in the design of those questionnaires made as a result. The evaluation indicated that the questions were difficult to understand and answer, placing an unnecessary burden on respondents. The design modifications simplified the instructions and questionnaire items without altering their content. **Chapter 4** describes the revisions in the content of the prototype questionnaires. Those revisions involve 1) reductions in the number of items, 2) reductions in the number of response scales per item, and 3) minor wording changes to specific variable definitions. This report concludes by providing the results of a brief laboratory pilot test of the revised instruments in **Chapter 5**.

## Chapter 2. Methods for Evaluation of Prototype Instruments

### Introduction

On April 30, 1998, the Instrument Revision Working Group, (See *Table 1*) was convened with the charge of identifying possible changes in the O\*NET instrumentation. This group was charged with making changes that would reduce the respondent burden (thereby increasing response rates) while keeping intact the Content Model. These considerations encouraged thorough appraisal, candid commentary, and, where appropriate, pointed criticism of previously planned practices. In order to make decisions on what changes to consider, several alternative forms of evaluation were utilized. In this chapter we describe the methodological approach used to evaluate the prototype instruments.

### Cognitive Methods: Overview

The O\*NET prototype instruments were evaluated using cognitive methods for questionnaire evaluation and design. Based on theory and methods of cognitive psychology, the cognitive approach to questionnaire design and evaluation has generated much research (Jobe & Mingay, 1991; Jobe, Tourangeau, & Smith, 1993; Lessler & Sirken, 1985). In the Federal Statistical System, the approach is applied at the National Center for Health Statistics (Royston, Bercini, Sirken & Mingay, 1986; Willis, Royston, & Bercini, 1991), at the Bureau of Labor Statistics (Dippo, 1989; Esposito & Hess, 1992) and at the Census Bureau (Campanelli, Rothgeb, & Martin, 1989; Campanelli, Martin, & Rothgeb, 1991; De Maio, Martin, & Sigman, 1987). A review of the work done at these agencies is contained in Jobe and Mingay (1991). The overall goal of cognitive evaluation is to identify those aspects of survey questions that make them easier to understand and answer.

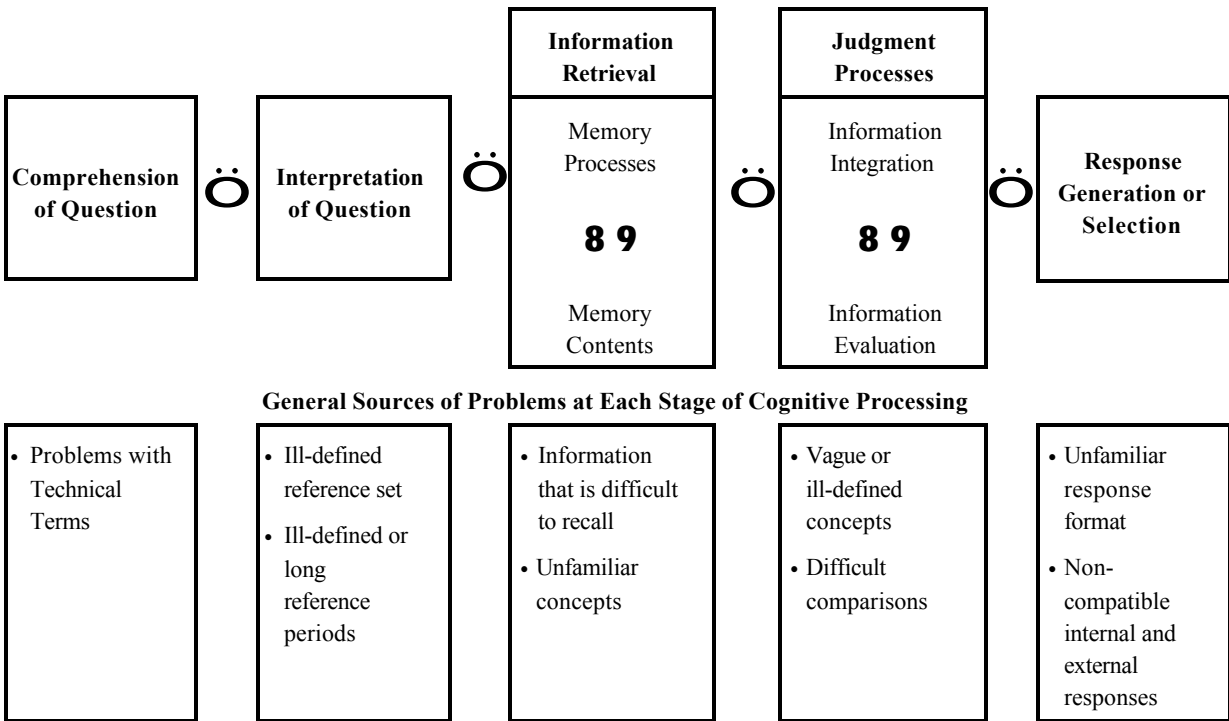

Cognitive methods focus on the questionnaire instrument, rather than on the entire survey process, and they can be applied at several points in the design process. According to Forsyth and Lessler (1991), cognitive methods can be categorized into four general types: *expert evaluation* (e.g., expert analysis or cognitive forms appraisal); *expanded interviews* (e.g., concurrent and retrospective think-aloud interviews); *targeted methods* (e.g., paraphrasing or rating tasks); and *group methods* (e.g., focus groups or group interviews). Each method has its strengths and limitations. In terms of instrument development, however, all cognitive laboratory methods share the advantage of providing information about the likely performance of the survey instrument in the field without incurring the high cost of full-scale field testing. All but the targeted methods approach were used in the evaluation of the prototype O\*NET data collection instruments.

### Expert Evaluation

In *expert evaluation*, a knowledgeable researcher reviews a questionnaire to gather an understanding of the response task and to note potential problems. The questionnaire's characteristics are described, including procedures for moving through the questionnaire, type of respondents, and the tasks required of the respondents. Lists are made of problems that respondents might have and types of mistakes they might make. The researcher then classifies the observations to get a general understanding of the questionnaire and specific points where difficulties may occur.

*Cognitive forms appraisal* (Forsyth, Lessler, & Hubbard, 1992) is one method of expert evaluation in which the appraiser systematically analyzes questions using a specific model of the response process. The survey response model used in the cognitive forms appraisal was one developed by Forsyth and Lessler (1991) (see also Forsyth, Hubbard & Lessler, 1990). It is based on cognitive models of the survey response process developed by survey methodologists (Cannell, Miller, and Oksenberg, 1981; Tourangeau & Raskinski, 1988; Willis, Royston, & Bercini, 1991) and similar to more general cognitive information processing models (Wyer & Srull, 1989; Wyer & Radvansky, 1999). **Figure 1** is a schematic of the response process model. **Figure 1** also indicates the kinds of difficulties with survey questions that are often identified by a cognitive forms appraisal.

**Figure 1. Cognitive Model of the Survey Response Process**

To illustrate the stages of the information processing, consider *Figure 2* which displays a typical questionnaire item from the prototype O\*NET Knowledges questionnaire. Note that there are two questions asked on the page: the Level question in the top half of the box and the Importance question in the bottom half.

- First, the respondent must **comprehend** the question to understand what is being asked. With regard to the level question, the respondent must first find the question on the page, and understand that it asks about the level of administration and management knowledge, as defined, needed to perform his/her job. For this item, the layout of the page, the definition of the knowledge area, and the boxed descriptions of high and low levels of the knowledge area may be difficult to comprehend.
- The respondent must then **interpret** the question (form a mental representation of the target) that he or she must evaluate and decide about range of relevant concepts (the *reference set*) of the question. For the Level question, the respondent must decide how the definition of administration and management knowledge applies to his/her job in general. If the worker is, say, a beautician, she may find this step difficult, given the definition of administration and management provided.

**Figure 2. Example Prototype Questionnaire Item (from Knowledges questionnaire)**

**1. Administration and Management**

Knowledge of principles and processes involved in business and organizational planning, coordination, and execution. This includes strategic planning, resource allocation, manpower modeling, leadership techniques, and production methods

Level  
What level of this knowledge is needed to perform this job?

Requires knowledge of high-level business and management principles and processes such as those required in large, multinational organizations with diversified products or services	Ô			2	
	Ó			2	Managing a \$10 million company
	Ò				
	Ñ			2	Administering a large retirement and nursing care facility
	Ð			2	Monitoring progress of a project to ensure timely completion.
	ã			2	Planning an effective staff meeting.
Requires knowledge of basic business and management principles and processes such as those required in small businesses with a single product or service.	î			2	Signing a pay voucher
					NR Not relevant at all for performance of this job

Importance  
How important is this knowledge to performance on this job?

Not Important	Somewhat Important	Important	Very Important	Extremely Important
î	ï	Ð	Ñ	Ò

- The respondent then **retrieves information from memory** (e.g., recalls relevant instances of behavior or relevant opinions), while taking into account the relevant time frame (the *reference period*: e.g., what was done last week or last year) or else reconstruct the behavior using general knowledge or salient information. In the Level question on Figure 2, our beautician must try to remember instances of how she applied knowledge of administration and management in her work - perhaps coordinating work schedules among fellow employees.
- Next, the respondent must make a **judgment** to determine whether the remembered instances of behavior are reasonably representative and if they are relevant to their interpretation of the question. Our beautician must decide if work scheduling is really part of her job and if it counts as being administration and management. If not, she must try to recall other, more typical activities that may fall into the general category.
- Once a private (internal) judgment is formed in the respondent's mind, he or she must **respond** by communicating an answer to the researcher. To do so, he or she must fit the judgments to the response format provided as part of the question. The respondent may also edit the response, before communicating it, to make it socially desirable or appropriate to the situation. Our beautician must figure out where her coordination of work schedules falls on the dimension anchored at Managing a \$10 million company (6 out of a possible 7) and signing a pay voucher (1 out of 7), and decide if she's being overly boastful or self-effacing by indicating that her administrative activities represent a 3 on that scale.

The model analyzes the answering of survey questions as a series of cognitive tasks. Although depicted as a linear, sequential process, answering a question (especially one that is hard-to-understand or hard-to-answer) can go through multiple cycles of this sequential process until a suitable answer is produced.

### Expanded Interviews

Expanded interview methods use survey respondents, rather than experts, to provide information about what it's like to answer the survey questions. Expanded interview methods include concurrent and retrospective think-aloud interviews. In these interviews, the respondent verbalizes his or her thoughts while answering the question (concurrent) or recalls how he or she answered the question (retrospective). In these interviews, the interviewer may ask follow-up probe questions to explicate respondent answers, or provide memory cue tasks to encourage the respondent to encourage more complete recall. Often the follow-up probe questions and memory cue tasks are developed to verify the reality of a potential problem identified by expert evaluation. There is often a debriefing of the respondent at the end of the interview in which he or she discusses general impressions of the survey questions and what strategies were used in answering them.

O\*NET data collection instruments were evaluated by Lesgold, Resnick, Katz, and Hwang at the Learning Research and Development Center, University of Pittsburgh. Their think-aloud interview protocols were directed toward respondents' ability to make valid ratings of skill levels and work/worker characteristics needed for a given job. The researchers were particularly interested in how respondents interpreted descriptions of skill and work activities, and how they used the descriptive anchors provided in the questions to make judgments about their own jobs.

### Group Methods

Group methods of instrument assessment include focus groups and group interviews. A *focus group* is a small group of individuals who are convened to discuss a specific topic under the direction of a moderator who promotes interaction and assures that the discussion remains focused on the topic. A focus group produces qualitative data that provides insights into the attitudes, perceptions and opinions of its participants. These results are solicited through semi-structured group discussions during which group participants influence each other – as they may in real life. In a *group interview*, an interviewer takes a more directive role in leading discussion of the topic of interest, rather than having group members talk freely.

The O\*NET data collection instruments were reviewed by a focus group of employees of Research Triangle Institute. They were provided with copies of the O\*NET questions in their original format and also the same question content presented in two alternative formats. Both questions and instructions were modified in the alternative formats. After completing the instruments, a group discussion was held focusing on usability of the instruments in general, with particular emphasis on the question formatting. The group was moderated by Dr. Michael Hubbard and Ms. Connie Hobbs.

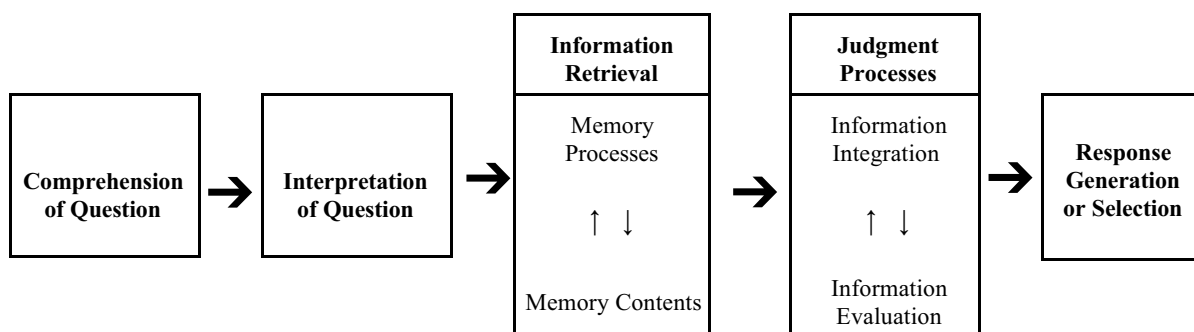

## Chapter 3. Evaluation of Prototype Instruments and Modification of Questionnaire Design

### Overall Evaluation of Prototype Questionnaires

All three sources of cognitive evaluation information (expert appraisal, expanded interviews and group methods) agreed in suggesting that there were potentially serious problems with the prototype O\*NET instruments. They all pointed to the possibility that at least some respondents could find the questions hard to understand, interpret, and answer. This difficulty might lead respondents to refuse to complete the questionnaires, resulting in low response rates and other consequent problems.

The cognitive appraisal of the prototype instruments in general suggested that there were problems at all stages of the question-answering process. *Figure 3* includes a summary of the kinds of problems identified by the cognitive appraisal. Discussion of specific instruments, below, will provide more detail regarding these problems.

**Figure 3. Problems with O\*NET Questions Identified by Cognitive Process Model**

### Difficulties with O'NET Questions

<ul style="list-style-type: none"> <li>• Undefined technical terms</li> <li>• Vague or Ambiguous technical terms</li> <li>• Confusing examples</li> <li>• Long sentences with polysyllabic words</li> </ul>	<ul style="list-style-type: none"> <li>• Many abstract concepts</li> <li>• Assumes knowledge of conceptual domains of interest</li> <li>• Vague or abstract reference set</li> <li>• Unspecified reference period</li> </ul>	<ul style="list-style-type: none"> <li>• Unfamiliar level of abstraction for usual activities</li> <li>• Novel concepts related to job characteristics</li> </ul>	<ul style="list-style-type: none"> <li>• Difficulty combining abstract concepts with unfamiliar views of own behavior</li> </ul>	<ul style="list-style-type: none"> <li>• Difficulty locating answer on unfamiliar response scales</li> </ul>
---	--	---	--	--

## General Evaluation of Box-Format questionnaires

The Abilities, Generalized Work Activities, Knowledge, Skills, and Work Context questionnaires, (the largest of the prototype O\*NET questionnaires) share a common format that poses a common set of challenges to respondents who complete them. They all have a similar appearance on the page: concepts are defined at the top of the page and questions are placed inside boxes. Hence they are referred to here as *box-format questions*. An example of a box-format question can be seen in **Figure 2**, the example questionnaire in **Chapter 2**.

All box-formatted items call for respondents to understand what is often an unfamiliar, novel and often highly abstract concept. They must then evaluate their jobs (not just themselves or their behavior) and make a series of judgments as to the applicability of the concept to their job, the level of the concept embodied in their job, the importance of the concept to their job and, sometimes, another judgment (depending on which questionnaire). To do this once is a challenging cognitive task and respondents may be called on to do this up to 50 times in the process of completing the survey.

The task of answering such an item requires a fair level of verbal ability (to understand the words presented), cognitive sophistication (to conceptualize these novel concepts), and abstract thinking (to generalize from their own experiences to make judgments about people who they imagine might do their job). Respondents must also be sufficiently familiar with questionnaires to easily project their mental representation onto a rating scale that is itself complex and difficult to understand. They must also be motivated to do this repeatedly on their own time. According to the cognitive appraisal, the box-format questionnaires had several problems, both with instructions associated with them and with the questions themselves.

Evaluation of Instructions for Answering Box-Format Questions. The instructions in all of the box-format questions consist of three or four pages: one page (or two, depending on the number of boxes per page in the questionnaire) consists of written descriptions of what the scales are and how to use them to answer questions. The remaining pages are examples of questionnaires “completed by an employee in a particular/different job”. The expert evaluator of the instructions found that they were written at too high a reading level: that they were overly long and unnecessarily abstract. The focus group comments were in agreement with this evaluation. Focus group participants thought the instructions had many problems: They were too long (should be only 1 page, perhaps with an additional page for an example), wordy, vague, and hard to read. Focus group members thought these problems would tend to discourage many people faced with making 30-50 more ratings as their task.

Evaluation of Box-Format Questionnaire Items. The formal cognitive appraisal of these questions identified the following areas in need of improvement:

- **QUESTION STRUCTURE:** Questions are complex in the way they are arrayed on the page. The pages in the Generalized Work Activities, Skills, Abilities, Work Styles, and Knowledges questionnaires present a challenging visual array, the complexity of which reflects the complexity of the questions. There are boxes within boxes, circled numbers, arrows, changes in type font, horizontal scales, vertical scales, italics, and bolding on each page. While respondents may become familiar with such pages, it requires a certain level of sophistication with forms and questionnaires — a level that may not be present in respondents with low levels of education (or very low levels of experience with such measures).
- **QUESTION CONTENT:** The questions call on the respondent to make judgements that are unfamiliar. Respondents are asked to rate their job in the abstract, rather than what they actually do on the job. This makes the questions more burdensome. They would be easier to answer if respondents are asked about what *they* do. This complicates the interpretation and memory tasks because the respondents must filter their memories and judge whether they are part of the job (rather than their own idiosyncratic behaviors). Many workers may have never distinguished between their personal job experiences and their job as such.
- **TECHNICAL TERMS:** There are many unfamiliar terms in these questions. Although they are defined and examples of them are provided, they are still often insufficiently defined or else they remain vague or ambiguous, especially for people who are unfamiliar with the relevant concepts. The fact that questions may require the respondent to think of their jobs in novel or unfamiliar ways, makes understanding/application of the terms more difficult.
- **TECHNICAL TERMS:** Most of the questions refer to high level abstractions of everyday activities. This makes it hard to (1) understand what the question is asking about and (2) retrieve and combine information to formulate an answer. This can result in unreliable and invalid answers. *It is likely that high levels of education - higher than high school - are necessary, due to the extensive vocabulary used in these instruments.*
- **REFERENCE SET:** Workers may not routinely think of jobs in terms of the level, importance, and job entry requirements of job-related skills.
- **REFERENCE SET:** Each **Level** question includes labels for interpreting the extreme values on the scale. For two questionnaires (Skills and Work Styles), the scales are anchored simply by HIGH and LOW. These scales are comparatively easy to rate because ratings of the level are reflections of the amount of the concept in question.

However, the concepts themselves, (e.g., *Integrity*, *Evaluating Information For Compliance to Standards* or *Synthesis/Reorganization*) may vary in how understandable they are. For the remaining questionnaires, the ends of the scales are identified by labels containing many words (as many as 40) and often containing numerous long, polysyllabic abstract or technical words. Thus the readability of these dimensional anchors may be poor. This makes it difficult for respondents with low levels of education to use the scales.

- REFERENCE SET: Each level question also includes examples of the concept to which the question refers. Some of these examples may be beyond the range of experience of many respondents. Even though they may be intended only to convey a general sense of the level of the concept, they can contribute to a sense that the questions are difficult, which can decrease effort on the questionnaire or completely discourage its completion.
- REFERENCE PERIOD: There is no explicit time period mentioned in the questions. While most may consider the job as it is now, others could also consider how the job was previously.
- RESPONSE SELECTION: Respondents are given a 7-point vertical scale for indicating the levels of the concepts, and 5-point horizontal scales for rating importance. They may have trouble alternating between the two scales.

The focus group comments were also critical of the box-format questionnaires. Focus group participants didn't like the (7-point vertical) scale, finding it hard to mark (it implied that marks between numbers were permissible, especially since example anchors pointed between numbers). They also didn't like numbers without verbal anchors. They found the descriptive anchors in the Level question box hard to understand. In cases where the definitions of high and low level attributes were provided in boxes within the question box (see Figure 2), focus group participants thought these definitions were hard to understand. Focus group participants sometimes found the right-side (example) anchors to be of limited utility in making a rating judgement about their job.

Focus group participants also didn't like the mixture of 5-point and 7-point scales and vertical and horizontal scales and thought that there should at most be 5 scale points on such complex rating scales (although substituting 5-point scales for 7-point scales might exacerbate the problem of example anchors pointing between numbers). They pointed out that the NR instruction (at the bottom of the box), though mentioned in the instructions, was soon forgotten or lost amid the visual complexity of the answer sheets.

### General Modification of Box-Format Questionnaire Items.

Based on the evaluations of the instruments outlined above, extensive redesign of the prototype instruments was undertaken. Modifications were made that would ease the response burden on respondents without changing the content of the questions.<sup>2</sup> Changes in the questionnaire formatting combined (1) responses to the issues raised in the questionnaire evaluation with (2) the expert judgment of the instrumentation working group. Many different formats were considered for the box-format questions, before the final recommended version was adopted. Included here are descriptions of the final recommended questionnaire formats (and comparisons between them and the initial formats).

Modification of Box-Format Questionnaire Instructions. The modified instructions for the box-format questionnaires have been shortened to one page (except for the Knowledges Questionnaire, which requires two pages to instruct respondents how to answer three questions about each knowledge area, instead of one or two as is the case in the remaining box-format questionnaires). An attempt was made to keep the instructions to a minimum. *Figure 4* is an example modified instruction page: the instructions for making Skills ratings.

---

<sup>2</sup> However, the modified versions of the questionnaires were also changed for other reasons (to reduce instrument redundancy and to improve readability) which did alter the questionnaire content. These modifications are discussed in *Chapter 4*.

## Figure 4. Example of Modified Instruction Page for Box-Format Questionnaires

### Instructions for Making Skills Ratings

These questions are about work-related skills. A **Skill** is the ability to perform a task well. It is usually developed over time through training or experience. A skill can be used to do work in many jobs or it can be used in learning. You will be asked about a series of different skills and how they relate to *your current job* - that is, the job you hold now.

Each skill in this questionnaire is named and defined.

For example:

<b>Writing</b>	<b>Communicating effectively in writing as appropriate for the needs of the audience.</b>
----------------	---

You are then asked to answer two questions about each skill:

### **A** *How important is the skill to the performance of your current job?*

For example:

<b>How <u>important</u> is WRITING to the performance of your current job?</b>				
Not	Somewhat		Very	Extremely
Important*	Important	Important	Important	Important
<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>

Mark your answer by putting an *X* through the number that represents your answer.

Do not mark on the line between the numbers.

**\*If you rate the skill as Not Important to the performance of your job, mark the one **1** then skip over question B and proceed to the next skill.**

### **B** *What level of the skill is needed to perform your current job?*

To help you understand what we mean by **level**, we provide you with examples of job-related activities at different levels. For example:

In the first paragraph, the content of the questionnaire is named and defined. Then the respondent's task is described. The remainder of the instructions describe the parts of each item and how to go about answering the questions accompanying each item. Respondents are explicitly told to mark the numbers and not to mark the line connecting them.

Accompanying each description is an example of how to answer the particular type of question being described. Because the example immediately follows the description of the question, there is less demand on the respondent to remember the description of the question before being shown how to answer it. In the original versions of the instructions, longer descriptions of all question types preceded examples of how any question should be answered. If the respondent considers the characteristic as not at all important to their job, they were instructed to mark the *Not Important* box on the scale and to skip subsequent questions about that characteristic. This instruction is explained on the instructions page and repeated for every characteristic for the revised box-format questions. In the prototype instruments, the instruction to skip subsequent questions (for characteristics seen as unimportant to the respondent's job) was provided only in the instructions and not thereafter.

Modification of Box-Format Questionnaire Items. There were a number of changes in the formatting of the box-format questionnaires. Decisions about these changes were made in a series of meetings and electronic conferences in which various alternative formats were presented and discussed.

- The boxes surrounding each question, and the labels for those boxes (i.e., Level, Importance, Frequency) were eliminated. This reduced the level of visual clutter of each page by removing unnecessary distractions from the questions. The convention of numbering the characteristics while distinguishing between questions about each characteristic was retained by labeling the Level question *A* and the Importance question *B*. The instructions distinguished between the two question types in a similar manner. All questions were left justified (instead of centered) to make it easier to locate the beginning of each question in the absence of the boxes.
- The name of the characteristic about which judgments are being made (e.g., the Skill, Generalized Work Activity, or Ability) was inserted into each IMPORTANCE and LEVEL question. Previously, these questions all asked about the importance or level of "this skill/activity/ability" without reminding the respondent what they were rating. This was done to reduce the memory burden on respondents in answering the survey questions.

Changes in the IMPORTANCE questions.

- The IMPORTANCE question was moved so that it would be the first question asked about each characteristic.

- The line connecting the numbers on the IMPORTANCE scale ended with the numbers  $\hat{\Gamma}$  and  $\hat{\Omega}$ , rather than extending beyond them as was done previously. This made the scale consistent with the LEVEL scale in this regard.
- The Not Relevant option became part of the IMPORTANCE question, represented at the extreme low-importance end of the scale. Thus, it was removed as an alternative for the LEVEL question.
- The instruction to skip subsequent LEVEL (and other questions, where appropriate) was repeated for each characteristic immediately following the IMPORTANCE question. This was done to increase the likelihood that respondents would appropriately skip unnecessary questions, thereby reducing respondent burden.

#### Changes in the LEVEL questions.

- The response scale was presented in a horizontal format, instead of its original orientation.
- For questions where descriptions of highest and lowest levels of the characteristic were indicated by long boxed definitions (such as in *Figure 1*) these were eliminated and the only label for the entire scale was the word *Highest Level* located below the  $\hat{\Omega}$  (the scale end point). This same formatting was applied to questionnaires (such as the *Skills Questionnaire*) where the ends of the level questions were labeled simply High and Low.
- The anchors providing examples of specific job-related activities were rounded to make them point to specific scale numbers, rather than between numbers as was done previously. Although this might compromise the apparent ratio level of measurement implicit in the precise placement of the arrows (which were based on results of statistical analysis from previous studies), the response task was made easier by emphasizing the use of numbers, instead of suggesting that marking between numbers was acceptable.<sup>3</sup> This was reinforced by the instruction not to mark on the line between the numbers. However, the difference between the 7-point LEVEL and the 5-point IMPORTANCE scale was retained. This was done to keep data from future surveys consistent with current O\*NET information.
- The number of specific job-related anchors was always three, as opposed to as many as nine in the previous questionnaire. These three anchors generally pointed at scale numbers 2, 4, and 6; although in some cases other numbers were appropriate. The three anchors were chosen to be those that were most concrete understandable among those available.

---

3

The psychometric properties of these anchors will be re-visited during O\*NET's pre-test phase.

## Overall Evaluation of Other Questionnaires

The prototype O\*NET data collection instruments included other questionnaires, in addition to the box-format instruments. These include the *Background Information Questionnaire*; the *Training, Education, Licensure, and Experience Questionnaire*; and the *Work Context Questionnaire*. These questionnaires were generally shorter than the box-format questionnaires (under 30 questions), with the exception of the *Work Context Questionnaire* which was among the longest questionnaires (107 questions). While not identical in format, they were subjected to cognitive appraisal, the results of which are discussed here. {The original set of instruments included the *Occupational Values Questionnaire*. However, this questionnaire will not be administered in the pretest}

Evaluation of Instructions for Other Questionnaires. Understanding how the questions were formatted posed less of a cognitive task than was the case for the box-format questions. As a result, the instructions were shorter. However, there were difficulties with the instructions. They were highly abstract and tended to be confusing. Instead of just telling respondents how to complete the questionnaires, they provided additional information about why the questions were being asked. This review found such information to be of questionable value. For instance:

- The instructions for the *Background Information Questionnaire* informs respondents that “In this questionnaire you will provide information about your background. ...Your responses to these questions will help to determine whether the goal of diversity is being achieved. ...Responding to these questions is optional; however, complete answers will make tracking the diversity of participants possible...” No further information was provided about what is meant by “your background” or “diversity”. The remainder of the instructions contained information that belongs in a statement of informed consent. Thus, since no instructions for completing the questionnaire were provided, simply having a cover with the name of the questionnaire, followed by the questions, would suffice.
- The instructions to the *Training, Education, Licensure, and Experience Questionnaire* were comparatively brief and to the point, although they could have been even shorter without loss of information.
- Likewise, the instructions to the *Work Context Questionnaire* were brief, although needlessly verbose. These instructions mention a reference period (which the other questionnaires fail to do), but they do not consistently guide all respondents to answer in the same manner. Subjects are left free to choose the reference period, so that answers of some subjects will be referring to a different time period than those of others. While this makes the instruction less burdensome or constraining, it makes data collected by different respondents difficult to compare (to the extent that they choose to consider different reference periods). The instructions also fail to tell the respondent how to answer the questions. Since most questions are answered using a continuous line accompanied by verbal anchors and circled numbers, it is not clear which of these should be used to answer the questions. Respondents may opt for making a mark on the line, which would make data entry difficult for those questions.

Evaluation of Questionnaire Items for Questionnaires. The formatting of the *Background Information* and the *Training, Education, Licensure, and Experience* questionnaires was not overly challenging. The only real formatting challenge among these instruments was that the *Training, Education, Licensure, and Experience questionnaire* used 6 different ways of formatting the questions within the same questionnaire. The formatting of the *Work Context Questionnaire* was more problematic. Some of the questions have dangling labels which identify what the question is about, but which are not part of the question itself. (e.g., 1: Formality of Communication, 27: Decision Latitude). Sometimes, these contain important information for interpreting the questions (as in Q17-21, where definitions of terminology are provided), but usually, they contribute nothing to the question being asked and are probably more of interest to researchers than respondents.

A more serious problem with the *Work Context Questionnaire* arises from the response scales used. While most questions use horizontal response scales, they change from 7-point to 5-point scales and back numerous times. There are also frequent changes in the scale anchors, which the respondent may or may not notice. For some questions, a 7-point scale is used without a verbal anchor for what each number represents, making it difficult to make distinctions among the unlabeled numbers.

#### Modification of Other Questionnaires

Modification of *Background Information Questionnaire* Instructions. The prototype instructions were reorganized so that the modified instructions contain two explanatory paragraphs and a new paragraph explaining how the questions should be answered. The first paragraph addressed issues of voluntariness and privacy. The second paragraph explained the purpose of the questionnaire and its importance. In the previous instructions, these themes were present in both introductory paragraphs, making it difficult to understand them. The previous version of the instructions had no instruction about how to answer the questions.

Modification of *Background Information Questionnaire* Items. The content of the prototype *Background Information Questionnaire* was modified by deleting questions about the respondent's name, organization, and other descriptors of his or her work. Formatting modifications corresponded to the modified content. Instead, the respondent was asked to write in his or her job title and to list how long they worked at their job. The remaining questions requested demographic information: year of birth, gender, Hispanic ethnicity, race, handicap and disability status. All questions would be answered by checking boxes or by writing in a number (for year of birth) or writing on a blank line (for job title, other Hispanic group, other race or specify Indian tribe).

Modification of the *Training, Education, Licensure, and Experience Questionnaire* Instructions. The modified instructions simply said what the questionnaire was about and told respondents how to respond (put an **X** in the box). Since the questionnaire was reformatted so that responding to all questions had the same response format, it was easier to tell respondents what to do. Previously, the variety of response formats made it necessary to tell respondents to “mark” the answers without saying how.

Modification of the *Training, Education, Licensure, and Experience Questionnaire* Items. The content of the prototype *Training, Education, Licensure, and Experience* questionnaire was modified by deleting questions about Required Instructional Programs, Level of Education in Specific Subject Areas, and Licensure, Certification, and Registration. It was renamed the *Education and Experience Questionnaire*. The question about required level of education was reformatted so that it can be answered by putting an ‘**X**’ in a box — instead on a short line before each answer option (making it consistent with marking other instruments). The experience questions were reformatted so that the set of answer options was repeated after each of the four questions. In the previous version, instructions for how to answer the questions were placed above the questions and the respondent would have to shift his or her attention repeatedly between the question and the instructions.

Modification of the *Work Context Questionnaire* Instructions. The modifications to the instructions for the *Work Context Questionnaire* involved a slight shortening of the wording. The previous version instructed respondents to consider the appropriate time frame when answering the questions. However, the wording of that instruction left so much to the discretion of the respondent that it was easier to simply eliminate it. The new instructions provided an example of a question and demonstrated how to answer it.

Modification of the *Work Context Questionnaire* Items. Modifications of the format of the *Work Context Questionnaire* were as follows:

- Questionnaire items were renumbered so that a single-level numbering scheme (all questions numbered 1, 2, etc.) was employed, rather than a two-level scheme (Sections of the questionnaire given numbers and questions within each section having lower-case letters: a, b, etc.). This involved removing the section head detached from any question (such headings are often overlooked or ignored) and making each question a unified whole that is easier to understand and think about (without searching the questionnaire for scattered pieces of the question).
- All questions were answered using horizontal 5-point scales, instead of shifting between 5-point, 6-point, 7-point, and 8-point scales as was done in the prototype questionnaire. Every scale point in the modified questionnaire had an accompanying verbal

- anchor instead of the prototype scales, some of which had as many as four of seven scale points unanchored. The only exceptions were the last two questions which used horizontal 3-point scales. These same questions were answered with the more traditional multiple choice formatting used in the previous version of the questionnaire.

This chapter presented the cognitive evaluation all of the prototype questionnaires and how they were modified to address the shortcomings identified by the evaluation. The evaluation indicated that the questions were difficult to understand and answer, placing an undue burden on respondents. This, in turn, could lead respondents to them give up because the task is too difficult or out of frustration, resulting in low response rates. The modifications suggested by the instrumentation working group were designed to alleviate the difficulties by simplifying the instructions and questionnaire items without altering their content. In *Chapter 4*, we will describe other modifications of the prototype questionnaires that did involve changes in the content of the questionnaires.

## **Chapter 4. Revision of Instrument Content - Scale Redundancy And Reading Level**

### Introduction

O\*NET Prototype Project Director, Norman Peterson, in a memorandum to the Department of Labor, dated 4/9/97, outlined a number of options for reducing burden and increasing return rate. Eliminating descriptors, combining individual descriptors into composites, eliminating scales, eliminating domains, and considering some domains as the necessary core (while data from other domains would be collected if the opportunity presented itself) were all described as possible options.

Of these, he argued that the best options involved: a) an elimination of items that have the poorest conceptual and/or empirical support and b) combining items that took advantage of conceptual and empirical redundancy. He argued that these options presented some potentially significant advantages as well. For example, the validity of the taxonomy could be enhanced if the changes resulted in a taxonomic set of descriptors that were more correspondent with current and previous research, and which presented respondents with constructs to rate that were conceptually more distinct and more meaningful.

Peterson also argued that burden could be reduced considerably if some of the response scales were eliminated and that such an option should be carefully considered. In general, he argued for keeping the level scale and opting to eliminate “frequency” and/or “importance,” depending on the existing data.

The changes described here are consistent with Peterson’s suggestions and priorities. The next sections will summarize the specific changes and the reasons for them. Further, the proposed changes were few in number and constitute only minimal alterations to the content of the questionnaires. No changes were made to the “Content Model,” no domains were eliminated, and no changes were made to the meaning of each domain. That is, the changes that were made to the O\*NET questionnaires do not alter the a priori conceptual factor structure for each domain that guided the development of the O\*NET prototype (as described in Peterson, 1995).

Minimal though they were, the combined effects of small reductions in the number of items, carefully considered eliminations of some response scales, and changes in format readability have significantly reduced the sheer size of the questionnaires, altered their formidable appearance, and significantly reduced the time it takes to complete them.

## General Issues Regarding Changes in Instrument Content

The next sections summarize the changes that were made. Appendix A presents the changes (between prototype and current version) in variable definition and wordings for each questionnaire. Appendix B lists the O\*NET data dictionary variables that will be included in the current version of the O\*NET Survey. Appendix C lists all variables from the O\*NET data dictionary and indicates (a) changes in their definition or formatting, and (b) the sources of the data in the O\*NET database. Before describing the changes, several general issues should be noted:

- Some of the items in all the instruments and all of the items in some of the instruments (i.e. Abilities, Styles, Skills) ask for judgments about variables — variables that may require significant time or space to fully explain to someone who is not familiar with the associated background literature. However, for practical reasons, questionnaires contain short definitions. Consequently, shortening a definition simply for the sake of reducing the reading time was not a goal for the attached items. If anything, some people could urge that definitions could be *longer*. However, reducing the amount of confusing, extraneous, or unnecessarily complex text was a goal.
- The job incumbent may not always be the most appropriate source of the ratings for abilities and styles, and perhaps skills as well. An appropriate rater would already have some knowledge of these domains in terms of what these constructs mean and how they are typically assessed (e.g., Flexibility of Closure, Perceptual Speed). Even people who have researched these characteristics of individual differences still have disagreements over what is the optimal characterization for some of them. Some job incumbents may find making judgments based on the current definitions and scale anchors to be a difficult task.
- Another issue is whether the job incumbents should describe their own personal job situation or attempt to describe what the job/occupation is like in general (i.e., for job holders in general). It is probably an easier judgment task to describe your own job situation. However, the O\*NET model wants descriptions of the general characteristic nature of the occupations, and the directions for the current versions of the instruments ask the rater to use a general frame-of-reference. Asking for descriptions of the respondents' own job would be a major change to the directions for the instruments, with unknown effects. Such effects could be positive, negative, or neutral. If the sample of incumbents is reasonable, the frame-of-reference effects shouldn't be that great, but that is not known at this point. The goal is to minimize within-occupation variance and to maximize meaningful cross-occupation variance.

- The redundancy across domain questionnaires was another general issue. For example, Creativity or Idea Generation can be found in Abilities, Work Styles, Skills, and Generalized Work Activities. Problem solving can be found in Work Styles, Skills, and Generalized Work Activities. At some point the O\*NET Model should get clearer about the distinctions among domains, and proceed to deal with these redundancies.

### Summary of Substantive Questionnaire Revisions

Table 2 summarizes the revisions that were proposed and adopted for the seven principal taxonomies in the O\*NET Content Model. Two kinds of revisions are reflected in the table: 1) reductions in the number of items and 2) reductions in the number of response scales per item. Minor wording changes were made to some of the specific variable definitions, but none of these represented substantive alterations and thus, these kinds of minor edits are not reflected in the table. In all cases, wording changes were agreed upon by the O\*NET Consortium panel and DOL representatives. In ten instances (out of over 250 items), there were minor changes to the title of the variables. These changes in the descriptor title were always for the purpose of making the title more correspondent with the definition.

**Table 2. O\*NET Questionnaire Item (Descriptor Variable) Revisions**

<b>Measurement Questionnaire</b>	<b># of Items in Revised Version</b>	<b># of Items in Original Version</b>	<b>Response Scales</b>
Work Values	0	21	Dropped from current O*NET questionnaire
Abilities	52	52	No changes
Knowledge	33	33	Keep Level and Importance, Drop Job Specialty Requirements
Education & Training	5	15	Drop Instructional Program Required Drop Level of Education Required in Specific Subject Areas Drop Licensure, Certification, and Registration
Work Styles	16	17	Keep Importance Scale, Drop Level Scale
Skills	35	46	Keep Level and Importance, Drop Job Entry Requirements
Generalized Work Activities	41	42	Keep Level and Importance, Drop Frequency
Work Context	<u>57</u>	<u>97</u>	Adopt consistent use of 5-point scales
TOTAL ITEMS	239	323	

There are several points to be noted about the table.

- The Occupational Values questionnaire is not being administered to job incumbents in the pretest. This questionnaire is taken directly from the Minnesota Theory of Work Adjustment (Dawis and Lofquist, 1984). When used to assess the incentive or reinforcing properties of jobs or occupations, the instrument is always completed by supervisors and yields the Occupational Reinforcer Pattern (ORP) for the occupation. When used by job incumbents, it is viewed as an indicator of individual job satisfaction (Dawis and Lofquist, 1984).
- The reduction of the number of Skill descriptors from 46 to 35 is solely a function of making certain item combinations. Job Entry Requirements were dropped from the Skills Questionnaire because job incumbents tend to be poor sources of information for this.
- The checklist of “Instructional Programs Required” and the Level of Education Required in “15 Educational Subject Areas” checklist do not appear here, as is the case with “Job Specialty Requirements” in the Knowledges Questionnaire. These data for occupations can be obtained from other sources (i.e., data collected by other organizations).
- The greatest number of item deletions were made on the Work Context Questionnaire. These will be detailed in the Work Context section. For six items, two of the three response scales were dropped. Consequently, these six are counted as six, and not 18 for purposes of representing the total number of items. The total item count in the table may not correspond precisely to other item counts. For example, in the original version, if the multiple responses per item are included the total number of judgments is 97.
- The Level scale was eliminated from the Work Styles Questionnaire due to previous findings that it was highly redundant with the Importance scale.
- The Frequency scale was dropped from the Generalized Work Activities Questionnaire because it has been found to be highly correlated with Importance and also redundant with Frequency scale ratings for tasks.

Appendix A contains documentation of the specific changes for each questionnaire. First, the original version of the item/descriptor is presented, then the modified version is shown. For some items, there were no changes, or only minor wording changes. For a smaller number of items, more substantial changes were made. For these items, the reasons/rationale for the change are given.

The outcomes of the item edits are described below.

- Appendix A presents all the variable (item) titles and definitions for Abilities, Generalized Work Activities, Knowledge, Education and Training, Work Styles, Skills, and Work Context. That is, no items are omitted. The attached versions represent the results of synthesizing the suggestions of Instrument Revision Working Group members for semantic/stylistic clarification and simplification. Some items changed a fair amount, some changed a little bit and some changed not at all. The substantive meanings were not changed, only clarified.
- The domain frame-of-reference (as in the ability to, knowledge of, etc.) was retained as part of each variable definition even though it is redundant across the items in a domain. We believe that the respondents need all the help they can get in trying to keep clear what kind of characteristic is being rated.

## Chapter 5. Pilot Testing

As drafts of the revised instruments were produced, they were tested to evaluate the results of modifications. Testing also enabled the revision of estimates for the time needed to complete the various instruments. Such information was crucial to the design of an effective survey and for obtaining approval from the Office of Management and Budget (OMB) for conducting subsequent data collection.

### Procedures

A small test of the questionnaires was conducted in August, 1998, to obtain completion times to individual questionnaires. The average times are based on from 2 to 7 people answering the questionnaires. Because some questionnaires were not ready until the timing tests were already under way, completion times are based on only two or three raters. Participants in the timing exercise were 11 RTI employees from a variety of trade jobs (carpenter, HVAC technician, plumber, electrician) as well as clerks and supervisors from RTI's data preparation department. Not all respondents had task lists (a suitable match could not be found for the data preparation jobs), but all completed at least 2 instruments.

### Results

*Table 3* contains the results of the completion time testing. Included in Table 3 are the estimated times for completion of the prototype instruments. These times were obtained from the Clearance Package submitted to the OMB for previous testing of the prototype instruments. The scope of the completion time testing did not allow rigorous testing of the instruments under field conditions. However, the shorter completion times for the revised instruments compared to the prototype instruments indicate that the revisions were successful at reducing the burden on respondents. However, only more thorough testing of the revised instruments can demonstrate that they are also effective at measuring the information necessary to meet the needs of the content model and O\*NET more generally.

**Table 3. Completion Times for O\*NET Questionnaires (Minutes:Seconds)**

<b>QUESTIONNAIRE</b>	<b>Completion time for Prototype Instrument <sup>1</sup></b>	<b>Number of Raters</b>	<b>Completion Times from Tests of Revised Instruments</b>		
			<b>Mean</b>	<b>Min</b>	<b>Max</b>
<b>Work Style</b>	8:48	4	3:67	2:00	6:00
<b>Work Context</b>	23:00	3	14:33	13:00	16:00
<b>Generalized Work Activities</b>	20:00	4	13:50	10:00	15:00
<b>Abilities</b>	24:00	5	16:80	10:00	25:00
<b>Skills</b>	27:30	2	17:00	15:00	19:00
<b>Knowledge</b>	14:00	2	12:00	10:00	14:00

<sup>1</sup> Obtained from the Clearance Package submitted to the OMB for previous testing of the prototype instruments.

## Abilities

### Original

### Revision

- |   |   |
|---|---|
| <p><b>1. Oral Comprehension</b><br/>The ability to listen to and understand information and ideas presented through spoken words and sentences.</p> <p><b>2. Written Comprehension</b><br/>The ability to read and understand information and ideas presented in writing.</p> <p><b>3. Oral Expression</b><br/>The ability to communicate information and ideas in speaking so others will understand.</p> <p><b>4. Written Expression</b><br/>The ability to communicate information and ideas in writing so others will understand.</p> <p><b>5. Fluency of Ideas</b><br/>The ability to come up with a number of ideas about a given topic. It concerns the number of ideas produced and <u>not</u> the quality, correctness, or creativity of the ideas.</p> <p><b>6. Originality</b><br/>The ability to come up with unusual or clever ideas about a given topic or situation, or to develop creative ways to solve a problem.</p> <p><b>7. Problem Sensitivity</b><br/>The ability to tell when something is wrong or is likely to go wrong. It does <u>not</u> involve solving the problem, only recognizing that there is a problem.</p> <p><b>8. Deductive Reasoning</b><br/>The ability to apply general rules to specific problems to come up with logical answers. It involves deciding if an answer makes sense.</p> | <p><b>1.</b> No change.</p> <p><b>2.</b> No change.</p> <p><b>3.</b> No change.</p> <p><b>4.</b> No change.</p> <p><b>5. Fluency of Ideas (Minimal)</b><br/>The ability to come up with a number of ideas about a topic (the <i>number</i> of ideas is important, <u>not</u> their quality, correctness, or creativity).</p> <p><b>6.</b> No change.</p> <p><b>7.</b> No change.</p> <p><b>8. Deductive Reasoning (Minimal)</b><br/>The ability to apply general rules to specific problems to produce answers that make sense.</p> |
|---|---|

## Abilities

### Original

- 9. Inductive Reasoning**  
The ability to combine separate pieces of information, or specific answers to problems, to form general rules or conclusions. It includes coming up with a logical explanation for why a series of seemingly unrelated events occur together.
- 10. Information Ordering**  
The ability to correctly follow a given rule or set of rules in order to arrange things or actions in a certain order. The things or actions can include numbers, letters, words, pictures, procedures, sentences, and mathematical or logical operations.
- 11. Category Flexibility**  
The ability to produce many rules so that each rule tells how to group (or combine) a set of things in a different way.
- 12. Mathematical Reasoning**  
The ability to understand and organize a problem and then to select a mathematical method or formula to solve the problem.
- 13. Number Facility**  
The ability to add, subtract, multiply, or divide quickly and correctly.
- 14. Memorization**  
The ability to remember information such as words, numbers, pictures, and procedures.
- 15. Speed of Closure**  
The ability to quickly make sense of information that seems to be without meaning or organization. It involves quickly combining and organizing different pieces of information into a meaningful pattern.

### Revision

- 9. Inductive Reasoning (Minimal)**  
The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).
- 10. Information Ordering (Minimal)**  
The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).
- 11. Category Flexibility (Minimal)**  
The ability to generate or use different sets of rules for combining or grouping things in different ways.
- 12. Mathematical Reasoning (Minimal)**  
The ability to choose the right mathematical methods or formulas to solve a problem.
- 13.** No change.
- 14.** No change.
- 15. Speed of Closure (Minimal)**  
The ability to quickly make sense of, combine, and organize information into meaningful patterns.

## Abilities

### Original

#### **16. Flexibility of Closure**

The ability to identify or detect a known pattern (a figure, object, word, or sound) that is hidden in other distracting material.

#### **17. Perceptual Speed**

The ability to quickly and accurately compare letters, numbers, objects, pictures, or patterns. The things to be compared may be presented at the same time or one after the other. This ability also includes comparing a presented object with a remembered object.

#### **18. Spatial Orientation**

The ability to know one's location in relation to the environment, or to know where other objects are in relation to one's self.

#### **19. Visualization**

The ability to imagine how something will look after it is moved around or when its parts are moved or rearranged.

#### **20. Selective Attention**

The ability to concentrate and not be distracted while performing a task over a period of time.

#### **21. Time Sharing**

The ability to efficiently shift back and forth between two or more activities or sources of information (such as speech, sounds, touch, or other sources).

#### **22. Arm-Hand Steadiness**

The ability to keep the hand and arm steady while making an arm movement or while holding the arm and hand in one position.

### Revision

**16.** No change.

#### **17. Perceptual Speed (Minimal)**

The ability to quickly and accurately compare similarities and differences among sets of letters, numbers, objects, pictures, or patterns. The things to be compared may be presented at the same time or one after the other. This ability also includes comparing a presented object with a remembered object.

#### **18. Spatial Orientation (Minimal)**

The ability to know your location in relation to the environment or to know where other objects are in relation to you.

**19.** No change.

#### **20. Selective Attention (Minimal)**

The ability to concentrate on a task over a period of time without being distracted.

#### **21. Time Sharing (Minimal)**

The ability to shift back and forth between two or more activities or sources of information (such as speech, sounds, touch, or other sources).

#### **22. Arm-Hand Steadiness (Minimal)**

The ability to keep your hand and arm steady while moving your arm or while holding your arm and hand in one position.

## Abilities

### Original

#### **23. Manual Dexterity**

The ability to quickly make coordinated movements of one hand, a hand together with the arm, or two hands to grasp, manipulate, or assemble objects.

#### **24. Finger Dexterity**

The ability to make precisely coordinated movements of the fingers of one or both hands to grasp, manipulate, or assemble very small objects.

#### **25. Control Precision**

The ability to quickly and repeatedly make precise adjustments in moving the controls of a machine or vehicle to exact positions.

#### **26. Multilimb Coordination**

The ability to coordinate movements of two or more limbs together (for example, two arms, two legs, or one leg and one arm) while sitting, standing, or lying down. It does not involve performing the activities while the body is in motion.

#### **27. Response Orientation**

The ability to choose quickly and correctly between *two or more movements* in response to *two or more different signals* (lights, sounds, pictures, etc.). It includes the *speed* with which the correct response is *started* with the hand, foot, or other body parts.

#### **28. Rate Control**

The ability to time the adjustments of a movement or equipment control in anticipation of changes in the speed and/or direction of a continuously moving object or scene.

### Revision

#### **23. Manual Dexterity (Minimal)**

The ability to quickly move your hand, your hand together with your arm, or your two hands to grasp, manipulate, or assemble objects.

#### **24. No change.**

#### **25. Control Precision (Minimal)**

The ability to quickly and repeatedly adjust the controls of a machine or a vehicle to exact positions.

#### **26. Multilimb Coordination (Minimal)**

The ability to coordinate two or more limbs (for example, two arms, two legs, or one leg and one arm) while sitting, standing, or lying down. It does not involve performing the activities while the whole body is in motion.

#### **27. Response Orientation (Minimal)**

The ability to choose quickly between *two or more movements* in response to *two or more different signals* (lights, sounds, pictures). It includes the speed with which the correct response is *started* with the hand, foot, or other body part.

#### **28. Rate Control (Minimal)**

The ability to time your movements or the movement of a piece of equipment in anticipation of changes in the speed and/or direction of a moving object or scene.

## Abilities

### Original

**29. Reaction Time**

The ability to quickly respond (with the hand, finger, or foot) to one signal (sound, light, picture, etc.) when it appears.

**30. Wrist-Finger Speed**

The ability to make *fast, simple*, repeated *movements* of the *fingers, hands, and wrists*.

**31. Speed of Limb Movement**

The ability to *quickly* move the arms or legs.

**32. Static Strength**

The ability to exert maximum muscle force to lift, push, pull, or carry objects.

**33. Explosive Strength**

The ability to use short bursts of muscle force to propel oneself (as in jumping or sprinting) or to throw an object.

**34. Dynamic Strength**

The ability to exert muscle force repeatedly or continuously over time. This involves muscular endurance and resistance to muscle fatigue.

**35. Trunk Strength**

The ability to use one's abdominal and lower back muscles to support part of the body repeatedly or continuously over time without "giving out" or fatiguing.

**36. Stamina**

The ability to exert one's self physically over long periods of time without getting winded or out of breath.

### Revision

**29. Reaction Time (Minimal)**

The ability to quickly respond (with the hand, finger, or foot) to a signal (sound, light, picture) when it appears.

**30.** No change.

**31. Speed of Limb Movement (Minimal)**

The ability to *quickly* move the arms and legs.

**32.** No change.

**33.** No change.

**34.** No change.

**35. Trunk Strength (Minimal)**

The ability to use your abdominal and lower back muscles to support part of the body repeatedly or continuously over time without "giving out" or fatiguing.

**36. Stamina (Minimal)**

The ability to exert yourself physically over long periods of time without getting winded or out of breath.

## Abilities

### Original

- 37. Extent Flexibility**  
The ability to bend, stretch, twist, or reach out with the body, arms, and/or legs.
- 38. Dynamic Flexibility**  
The ability to quickly and repeatedly bend, stretch, twist, or reach out with the body, arms, and/or legs.
- 39. Gross Body Coordination**  
The ability to coordinate the *movement of the arms, legs, and torso together* in activities where the whole body is in motion.
- 40. Gross Body Equilibrium**  
The ability to keep or regain one's body balance or stay upright when in an unstable position.
- 41. Near Vision**  
The ability to see details of objects at a close range (within a few feet of the observer).
- 42. Far Vision**  
The ability to see details at a distance.
- 43. Visual Color Discrimination**  
The ability to match or detect differences between colors, including shades of color and brightness.
- 44. Night Vision**  
The ability to see under low-light conditions.
- 45. Peripheral Vision**  
The ability to see objects or movement of objects to one's side when the eyes are focused forward.

### Revision

- 37. Extent Flexibility (Minimal)**  
The ability to bend, stretch, twist, or reach with your body, arms, and/or legs.
- 38. Dynamic Flexibility (Minimal)**  
The ability to quickly and repeatedly bend, stretch, twist, or reach out with your body, arms, and/or legs.
- 39. Gross Body Coordination (Minimal)**  
The ability to coordinate the *movement of your arms, legs, and torso together* when the whole body is in motion.
- 40. Gross Body Equilibrium (Minimal)**  
The ability to keep or regain your body balance or stay upright when in an unstable position.
- 41. Near Vision (Minimal)**  
The ability to see details at close range (within a few feet of the observer).
- 42.** No change.
- 43.** No change.
- 44.** No change.
- 45. Peripheral Vision (Minimal)**  
The ability to see objects or movement of objects to one's side when the eyes are looking ahead.

## Abilities

### Original

#### **46. Depth Perception**

The ability to judge which of several objects is closer or farther away from the observer, or to judge the distance between an object and the observer.

#### **47. Glare Sensitivity**

The ability to see objects in the presence of a glare or bright lighting.

#### **48. Hearing Sensitivity**

The ability to detect or tell the difference between sounds that vary over broad ranges of pitch and loudness.

#### **49. Auditory Attention**

The ability to focus on a single source of auditory (hearing) information in the presence of other distracting sounds.

#### **50. Sound Localization**

The ability to tell the direction from which a sound originated.

#### **51. Speech Recognition**

The ability to identify and understand the speech of another person.

#### **52. Speech Clarity**

The ability to speak clearly so that it is understandable to a listener.

### Revision

#### **46. Depth Perception (Minimal)**

The ability to judge which of several objects is closer or farther away from you, or to judge the distance between you and an object.

**47.** No change.

#### **48. Hearing Sensitivity (Minimal)**

The ability to detect or tell the differences between sounds that vary in pitch and loudness.

#### **49. Auditory Attention (Minimal)**

The ability to focus on a single source of sound in the presence of other distracting sounds.

**50.** No change.

**51.** No change.

#### **52. Speech Clarity (Minimal)**

The ability to speak clearly so others can understand you.

## Generalized Work Activities

### Original

- 1. Getting Information Needed to Do the Job**  
Observing, receiving, and otherwise obtaining information from all relevant sources.
- 2. Identifying Objects, Actions, and Events**  
Identifying information received by making estimates or categorizations, recognizing differences or similarities, or sensing changes in circumstances or events.
- 3. Monitoring Processes, Materials, or Surroundings**  
Monitoring and reviewing information from materials, events, or the environment, often to detect problems or to find out when things are finished.
- 4. Inspecting Equipment, Structures, or Materials**  
Inspecting or diagnosing equipment, structures, or materials to identify the causes of errors or other problems or defects.
- 5. Estimating the Characteristics of Materials, Products, Events, or Information**  
Estimating sizes, distances, and quantities, or determining time, costs, resources, or materials needed to perform a work activity.
- 6. Judging the Qualities of Objects, Services, or Persons**  
Making judgments about or assessing the value, importance, or quality of things or people.

### Revision

- 1. Getting Information (Minimal)**  
Observing, receiving, and otherwise obtaining information from all relevant sources.
- 2. Identifying Objects, Actions, and Events (Minimal)**  
Identifying information by categorizing, estimating, recognizing differences or similarities, and detecting changes in circumstances or events.
- 3. Monitoring Processes, Materials, or Surroundings (Minimal)**  
Monitoring and reviewing information from materials, events, or the environment, to detect or assess problems.
- 4. Inspecting Equipment, Structures, or Materials (Minimal)**  
Inspecting equipment, structures, or materials to identify the cause of errors or other problems or defects.
- 5. Estimating the Quantifiable Characteristics of Products, Events, or Information (Minimal)**  
Estimating sizes, distances, and quantities; or determining time, costs, resources, or materials needed to perform a work activity.
- 6. Judging the Qualities of Objects, Services, or People (Minimal)**  
Assessing the value, importance, or quality of things or people.

## Generalized Work Activities

### Original

- 7. Evaluating Information for Compliance to Standards**  
Evaluating information against a set of standards and verifying that it is correct.
- 8. Processing Information**  
Compiling, coding, categorizing, calculating, tabulating, auditing, verifying, or processing information or data.
- 9. Analyzing Data or Information**  
Identifying underlying principles, reasons, or facts by breaking down information or data into separate parts.
- 10. Making Decisions and Solving Problems**  
Combining, evaluating, and reasoning with information and data to make decisions and solve problems. These processes involve making decisions about the relative importance of information and choosing the best solution.
- 11. Thinking Creatively**  
Originating, inventing, designing, or creating new applications, ideas, relationships, systems, or products, including artistic contributions.
- 12. Updating and Using Job-Relevant Knowledge**  
Keeping up-to-date technically and knowing one's own jobs' and related jobs' functions.

### Revision

- 7. Evaluating Information to Determine Compliance with Standards (Moderate)**  
Using relevant information and individual judgment to determine whether events or processes comply with laws, regulations, or standards.
- 8. Processing Information (Minimal)**  
Compiling, coding, categorizing, calculating, tabulating, auditing, or verifying information or data.
- 9. Analyzing Data or Information (Minimal)**  
Identifying the underlying principles, reasons, or facts of information by breaking down information or data into separate parts.
- 10. Making Decisions and Solving Problems (Minimal)**  
Analyzing information and evaluating results to choose the best solution and solve problems.
- 11. Thinking Creatively (Minimal)**  
Developing, designing, or creating new applications, ideas, relationships, systems, or products, including artistic contributions.
- 12. Updating and Using Relevant Knowledge (Moderate)**  
Keeping up-to-date technically and applying new knowledge to your job.

## Generalized Work Activities

### Original

- 13. Developing Objectives and Strategies**  
Establishing long-range objectives and specifying the strategies and actions to achieve these objectives.
- 14. Scheduling Work and Activities**  
Scheduling events, programs, activities, as well as the work of others.
- 15. Organizing, Planning, and Prioritizing Work**  
Developing plans to accomplish work, and prioritize and organizing one's own work.
- 16. Performing General Physical Activities**  
Performing physical activities that require moving one's whole body, such as in climbing, lifting, balancing, walking, stooping, where the activities often also require considerable use of the arms and legs, such as in the physical handling of materials.
- 17. Handling and Moving Objects**  
Using one's own hands and arms in handling, installing, positioning, and moving materials, or in manipulating things, including the use of keyboards.
- 18. Controlling Machines and Processes**  
Using either control mechanisms or direct physical activity to operate machines or processes (not including computers or vehicles).

### Revision

- 13. Developing Objectives and Strategies**  
(Minimal)  
Establishing long-range objectives and specifying the strategies and actions to achieve them.
- 14. Scheduling Work and Activities**  
(Minimal)  
Scheduling events, programs, and activities, as well as the work of others.
- 15. Organizing, Planning, and Prioritizing Work** (Minimal)  
Developing specific goals and plans to prioritize, organize, and accomplish your work.
- 16. Performing General Physical Activities**  
(Minimal)  
Performing physical activities that require considerable use of your arms and legs and moving your whole body, such as climbing, lifting, balancing, walking, stooping, and handling of materials.
- 17. Handling and Moving Objects** (Minimal)  
Using hands and arms in handling, installing, positioning, and moving materials, and manipulating things.
- 18.** No change.

## Generalized Work Activities

### Original

- 19. Interacting with Computers**  
Controlling computer functions by using programs, setting up functions, writing software, or otherwise communicating with computer systems.
- 20. Operating Vehicles, Mechanized Devices, or Equipment**  
Running, maneuvering, navigating, or driving vehicles or mechanized equipment, such as forklifts, passenger vehicles, aircraft, or water craft.
- 21. Drafting, Laying-Out, and Specifying Technical Devices, Parts, or Equipment**  
Providing documentation, detailed instructions, drawings, or specifications to inform others about how devices, parts, equipment, or structures are to be fabricated, constructed, assembled, modified, maintained, or used.
- 22. Implementing Ideas, Programs, Systems, or Products**  
Carrying out work activities using one's own ideas or directions and instructions from others to install, prepare, deliver, construct, or complete products or systems.
- 23. Repairing and Maintaining Mechanical Equipment**  
Fixing, servicing, aligning, setting up, adjusting, and testing machines, devices, moving parts, and equipment that operate primarily on the basis of mechanical (not electronic) principles.

### Revision

- 19. Working with Computers (Minimal)**  
Using computers and computer systems (including hardware and software) to program, write software, set up functions, enter data, or process information.
- 20.** No change.
- 21. Drafting, Laying Out, and Specifying Technical Devices, Parts, and Equipment (Minimal)**  
Providing documentation, detailed instructions, drawings, or specifications to tell others about how devices, parts, equipment, or structures are to be fabricated, constructed, assembled, modified, maintained, or used.
- Delete.
- 22. Repairing and Maintaining Mechanical Equipment (Minimal)**  
Servicing, repairing, adjusting, and testing machines, devices, moving parts, and equipment that operate primarily on the basis of mechanical (not electronic) principles.

## Generalized Work Activities

### Original

- 24. Repairing and Maintaining Electronic Equipment**  
Fixing, servicing, adjusting, regulating, calibrating, fine-tuning, or testing machines, devices, and equipment that operate primarily on the basis of electrical or electronic (not mechanical) principles.
- 25. Documenting/Recording Information**  
Entering, transcribing, recording, storing, or maintaining information in either written form or by electronic/magnetic recording.
- 26. Interpreting the Meaning of Information for Others**  
Translating or explaining what information means and how it can be understood or used to support responses or feedback to others.
- 27. Communicating with Supervisors, Peers, or Subordinates**  
Providing information to supervisors, fellow workers, and subordinates. This information can be exchanged face-to-face, in writing, or via telephone/electronic transfer.
- 28. Communicating with Persons Outside the Organization**  
Communicating with persons outside the organization, representing the organization to customers, the public, government, and other external sources. This information can be exchanged face-to-face, in writing, or via telephone/electronic transfer.

### Revision

- 23. Repairing and Maintaining Electronic Equipment (Minimal)**  
Servicing, repairing, calibrating, regulating, fine-tuning, or testing machines, devices, and equipment that operate primarily on the basis of electrical or electronic (not mechanical) principles.
- 24. Documenting/Recording Information (Minimal)**  
Entering, transcribing, recording, storing, or maintaining information in written or electronic/magnetic form.
- 25. Interpreting the Meaning of Information for Others (Minimal)**  
Translating or explaining what information means and how it can be used.
- 26. Communicating with Supervisors, Peers, or Subordinates (Minimal)**  
Providing information to supervisors, co-workers, and subordinates by telephone, in written form, e-mail, or in person.
- 27. Communicating with People Outside the Organization (Minimal)**  
Communicating with people outside the organization, representing the organization to customers, the public, government, and other external sources. This information can be exchanged in person, in writing, or by telephone or e-mail.

## Generalized Work Activities

### Original

- 29. Establishing and Maintaining Interpersonal Relationships**  
Developing constructive and cooperative working relationships with others.
- 30. Assisting and Caring for Others**  
Providing assistance or personal care to others.
- 31. Selling or Influencing Others**  
Convincing others to buy merchandise/goods, or otherwise changing their minds or actions.
- 32. Resolving Conflicts and Negotiating with Others**  
Handling complaints, arbitrating disputes, and resolving grievances, or otherwise negotiating with others.
- 33. Performing for or Working Directly with the Public**  
Performing for people or dealing directly with the public, including serving persons in restaurants and stores, and receiving clients or guests.
- 34. Coordinating the Work and Activities of Others**  
Coordinating members of a work group to accomplish tasks.
- 35. Developing and Building Teams**  
Encouraging and building mutual trust, respect, and cooperation among team members.

### Revision

- 28. Establishing and Maintaining Interpersonal Relationships (Minimal)**  
Developing constructive and cooperative working relationships with others, and maintaining them over time.
- 29. Assisting and Caring for Others (Moderate)**  
Providing personal assistance, medical attention, emotional support, or other personal care to others such as coworkers, customers, or patients.
- 30. Selling or Influencing Others (Minimal)**  
Convincing others to buy merchandise/goods or to otherwise change their minds or actions.
- 31. Resolving Conflicts and Negotiating with Others (Minimal)**  
Handling complaints, settling disputes, and resolving grievances and conflicts, or otherwise negotiating with others.
- 32. Performing for or Working Directly with the Public (Minimal)**  
Performing for people or dealing directly with the public. This includes serving customers in restaurants and stores, and receiving clients or guests.
- 33. Coordinating the Work and Activities of Others (Minimal)**  
Getting members of a group to work together to accomplish tasks.
- 34.** No change.

## Generalized Work Activities

### Original

- 36. Teaching Others**  
Identifying educational needs, developing formal training programs or classes, and teaching or instructing others.
- 37. Guiding, Directing, and Motivating Subordinates**  
Providing guidance and direction to subordinates, including setting performance standards and monitoring subordinates.
- 38. Coaching and Developing Others**  
Identifying developmental needs of others and coaching or otherwise helping others to improve their knowledge or skills.
- 39. Providing Consultation and Advice to Others**  
Providing consultation and expert advice to management or other groups on technical, systems-related, or process-related topics.
- 40. Performing Administrative Activities**  
Approving requests, handling paperwork, and performing day-to-day administrative tasks.
- 41. Staffing Organizational Units**  
Recruiting, interviewing, selecting, hiring, and promoting persons for an organization.
- 42. Monitoring and Controlling Resources**  
Monitoring and controlling resources and overseeing the spending of money.

### Revision

- 35. Training and Teaching Others**  
(Minimal)  
Identifying the educational needs of others, developing formal educational or training programs or classes, and teaching or instructing others.
- 36. Guiding, Directing, and Motivating Subordinates** (Minimal)  
Providing guidance and direction to subordinates, including setting performance standards and monitoring performance.
- 37. Coaching and Developing Others**  
(Minimal)  
Identifying the developmental needs of others and coaching, mentoring, or otherwise helping others to improve their knowledge or skills.
- 38. Providing Consultation and Advice to Others** (Minimal)  
Providing guidance and expert advice to management or other groups on technical, systems-, or process-related topics.
- 39. Performing Administrative Activities**  
(Minimal)  
Performing day-to-day administrative tasks such as maintaining information files and processing paperwork.
- 40. Staffing Organizational Units** (Minimal)  
Recruiting, interviewing, selecting, hiring, and promoting employees in an organization.
- 41.** No change.

## Knowledge

### Original

- 1. Administration and Management**  
Knowledge of principles and processes involved in business and organizational planning, coordination, and execution. This includes strategic planning, resource allocation, manpower modeling, leadership techniques, and production methods.
- 2. Clerical**  
Knowledge of administrative and clerical procedures and systems such as word processing systems, filing and records management systems, stenography and transcription, forms design principles, and other office procedures and terminology.
- 3. Economics and Accounting**  
Knowledge of economic and accounting principles and practices, the financial markets, banking and the analysis and reporting of financial data.
- 4. Sales and Marketing**  
Knowledge of principles and methods involved in showing, promoting, and selling products or services. This includes marketing strategies and tactics, product demonstration and sales techniques, and sales control systems.
- 5. Customer and Personal Service**  
Knowledge of principles and processes for providing customer and personal services including needs assessment techniques, quality service standards, alternative delivery systems, and customer satisfaction evaluation techniques.

### Revision

- 1. Administration and Management (Minimal)**  
Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.
- 2. Clerical (Minimal)**  
Knowledge of administrative and clerical procedures and systems such as word processing, managing files and records, stenography and transcription, designing forms, and other office procedures and terminology.
- 3. No change.**
- 4. Sales and Marketing (Minimal)**  
Knowledge of principles and methods for showing, promoting, and selling products or services. This includes marketing strategy and tactics, product demonstration, sales techniques, and sales control systems.
- 5. Customer and Personal Service (Minimal)**  
Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

## Knowledge

### Original

- 6. Personnel and Human Resources**  
Knowledge of policies and practices involved in personnel/human resource functions. This includes recruitment, selection, training, and promotion regulations and procedures; compensation and benefits packages; labor relations and negotiation strategies; and personnel information systems.
- 7. Production and Processing**  
Knowledge of inputs, outputs, raw materials, waste, quality control, costs, and techniques for maximizing the manufacture and distribution of goods.
- 8. Food Production**  
Knowledge of techniques and equipment for planting, growing, and harvesting of food for consumption including crop rotation methods, animal husbandry, and food storage/handling techniques.
- 9. Computers and Electronics**  
Knowledge of electric circuit boards, processors, chips, and computer hardware and software, including applications and programming.
- 10. Engineering and Technology**  
Knowledge of equipment, tools, mechanical devices, and their uses to produce motion, light, power, technology, and other applications.

### Revision

- 6. Personnel and Human Resources (Minimal)**  
Knowledge of principles and procedures for personnel recruitment, selection, training, compensation and benefits, labor relations and negotiation, and personnel information systems.
- 7. Production and Processing (Minimal)**  
Knowledge of raw materials, production processes, quality control, costs, and other techniques for maximizing the effective manufacture and distribution of goods.
- 8. Food Production (Minimal)**  
Knowledge of techniques and equipment for planting, growing, and harvesting food products (both plant and animal) for consumption, including storage/handling techniques.
- 9. Computers and Electronics (Minimal)**  
Knowledge of circuit boards, processors, chips, electronic equipment, and computer hardware and software, including applications and programming.
- 10. Engineering and Technology (Moderate)**  
Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services.

## Knowledge

### Original

#### **11. Design**

Knowledge of design techniques, principles, tools and instruments involved in the production and use of precision technical plans, blueprints, drawings, and models.

#### **12. Building and Construction**

Knowledge of materials, methods, and the appropriate tools to construct objects, structures, and buildings.

#### **13. Mechanical**

Knowledge of machines and tools, including their designs, uses, benefits, repair, and maintenance.

#### **14. Mathematics**

Knowledge of numbers, their operations, and interrelationships including arithmetic, algebra, geometry, calculus, statistics, and their applications.

#### **15. Physics**

Knowledge and prediction of physical principles, laws, and applications including air, water, material dynamics, light, atomic principles, heat, electric theory, earth formations, and meteorological and related natural phenomena.

#### **16. Chemistry**

Knowledge of the composition, structure, and properties of substances and of the chemical processes and transformations that they undergo. This includes uses of chemicals and their interactions, danger signs, production techniques, and disposal methods.

### Revision

#### **11. Design (Minimal)**

Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models.

#### **12. Building and Construction (Minimal)**

Knowledge of materials, methods, and the tools involved in the construction or repair of houses, buildings, or other structures such as highways and roads.

#### **13. Mechanical (Minimal)**

Knowledge of machines and tools, including their designs, uses, repair, and maintenance.

#### **14. Mathematics (Minimal)**

Knowledge of arithmetic, algebra, geometry, calculus, statistics, and their applications.

#### **15. Physics (Minimal)**

Knowledge and prediction of physical principles, laws, their interrelationships, and applications to understanding fluid, material, and atmospheric dynamics, and mechanical, electrical, atomic, and sub-atomic structures and processes.

#### **16. Chemistry (Minimal)**

Knowledge of the chemical composition, structure, and properties of substances and of the chemical processes and transformations that they undergo. This includes uses of chemicals and their interactions, danger signs, production techniques, and disposal methods.

## Knowledge

### Original

**17. Biology**

Knowledge of plant and animal living tissue, cells, organisms, and entities, including their functions, interdependencies, and interactions with each other and the environment.

**18. Psychology**

Knowledge of human behavior and performance, mental processes, psychological research methods, and the assessment and treatment of behavioral and affective disorders.

**19. Sociology and Anthropology**

Knowledge of group behavior and dynamics, societal trends and influences, cultures, their history, migrations, ethnicity, and origins.

**20. Geography**

Knowledge of various methods for describing the location and distribution of land, sea, and air masses including their physical locations, relationships, and characteristics.

**21. Medicine and Dentistry**

Knowledge of the information and techniques needed to diagnose and treat injuries, diseases, and deformities. This includes symptoms, treatment alternatives, drug properties and interactions, and preventive health-care measures.

### Revision

**17. Biology (Minimal)**

Knowledge of plant and animal organisms, their tissues, cells, functions, interdependencies, and interactions with each other and the environment.

**18. Psychology (Minimal)**

Knowledge of human behavior and performance; individual differences in ability, personality, and interests; learning and motivation; psychological research methods; and the assessment and treatment of behavioral and affective disorders.

**19. Sociology and Anthropology (Minimal)**

Knowledge of group behavior and dynamics, societal trends and influences, human migrations, ethnicity, cultures and their history and origins.

**20. Geography (Minimal)**

Knowledge of principles and methods for describing the features of land, sea, and air masses, including their physical characteristics, locations, interrelationships, and distribution of plant, animal, and human life.

**21. Medicine and Dentistry (Minimal)**

Knowledge of the information and techniques needed to diagnose and treat human injuries, diseases, and deformities. This includes symptoms, treatment alternatives, drug properties and interactions, and preventive health-care measures.

## Knowledge

### Original

#### **22. Therapy and Counseling**

Knowledge of information and techniques needed to rehabilitate physical and mental ailments, and to provide career guidance including alternative treatments, rehabilitation equipment and its proper use, and methods to evaluate treatment effects.

#### **23. Education and Training**

Knowledge of instructional methods and training techniques including curriculum design principles, learning theory, group and individual teaching techniques, design of individual development plans, and test design principles.

#### **24. English Language**

Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

#### **25. Foreign Language**

Knowledge of the structure and content of a foreign (non-English) language including the meaning and spelling of words, rules of composition and grammar, and pronunciation.

#### **26. Fine Arts**

Knowledge of theory and techniques required to produce, compose, and perform works of music, dance, visual arts, drama, and sculpture.

#### **27. History and Archeology**

Knowledge of past historical events and their causes, indicators, and impact on particular civilizations and cultures.

### Revision

#### **22. Therapy and Counseling (Minimal)**

Knowledge of principles, methods, and procedures for diagnosis, treatment, and rehabilitation of physical and mental dysfunctions, and for career counseling and guidance.

#### **23. Education and Training (Minimal)**

Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

#### **24.** No change.

#### **25.** No change.

#### **26. Fine Arts (Minimal)**

Knowledge of the theory and techniques required to compose, produce, and perform works of music, dance, visual arts, drama, and sculpture.

#### **27. History and Archeology (Minimal)**

Knowledge of historical events and their causes, indicators, and effects on civilizations and cultures.

## Knowledge

### Original

- 28. Philosophy and Theology**  
Knowledge of different philosophical systems and religions, including their basic principles, values, ethics, ways of thinking, customs, and practices, and their impact on human culture.
- 29. Public Safety and Security**  
Knowledge of weaponry, public safety, and security operations, rules, regulations, precautions, prevention, and the protection of people, data, and property.
- 30. Law, Government and Jurisprudence**  
Knowledge of laws, legal codes, court procedures, precedents, government regulations, executive orders, agency rules, and the democratic political process.
- 31. Telecommunications**  
Knowledge of transmission, broadcasting, switching, control, and operation of telecommunications systems.
- 32. Communications and Media**  
Knowledge of media production, communication, and dissemination techniques and methods including alternative ways to inform and entertain via written, oral, and visual media.
- 33. Transportation**  
Knowledge of principles and methods for moving people or goods by air, rail, sea, or road, including their relative costs, advantages, and limitations.

### Revision

- 28. Philosophy and Theology (Minimal)**  
Knowledge of different philosophical systems and religions. This includes their basic principles, values, ethics, ways of thinking, customs, practices, and their impact on human culture.
- 29. Public Safety and Security (Minimal)**  
Knowledge of relevant equipment, policies, procedures, and strategies to promote effective local, state, or national security operations for the protection of people, data, property, and institutions.
- 30. Law and Government (Minimal)**  
Knowledge of laws, legal codes, court procedures, precedents, government regulations, executive orders, agency rules, and the democratic political process.
- 31.** No change.
- 32. Communications and Media (Minimal)**  
Knowledge of media production, communication, and dissemination techniques and methods. This includes alternative ways to inform and entertain via written, oral, and visual media.
- 33. Transportation (Minimal)**  
Knowledge of principles and methods for moving people or goods by air, rail, sea, or road, including the relative costs and benefits.

## Knowledge

### Original

### Revision

**34 - 38.** Note that the revised Education and Training items, 1 - 5, were added to the end of the revised Knowledge Questionnaire used in the *O\*NET Data Collection Program*.

**39 - 54.** Note that the revised Work Styles items, 1 - 16, were added to the end of the revised Knowledge Questionnaire used in the *O\*NET Data Collection Program*.

## Education and Training

### Original

#### **Part 1. LEVEL OF EDUCATION REQUIRED TO PERFORM THIS JOB**

Please place an "X" next to the level of education required to perform this job. Note that this does not mean the education that you personally have obtained.

- a. **Less than a High School Diploma**
- b. **High School Diploma** (or High School Equivalence Certificate)
- c. **Post-Secondary Certificate** - awarded for training completed after high school (e.g., in Personal Services, Engineering-Related Technologies, Vocational Home Economics, Construction Trades, Mechanics and Repairers, Precision Production Trades)
- d. **Some College Courses**
- e. **Associate's Degree** (or other 2-year degree)
- f. **Bachelor's Degree**
- g. **Post-Baccalaureate Certificate** - awarded for completion of an organized program of study requiring 30 credit hours beyond the Bachelor's degree; designed for persons who have completed a Baccalaureate degree, but do not meet the requirements of academic degrees carrying the title of Master.
- h. **Master's Degree**
- i. **Post-Master's Certificate** - awarded for completion of an organized program of study of 60 credit hours beyond the Master's degree, but does not meet the requirements of academic degrees at the Doctoral level.
- j. **First Professional Degree** - awarded for completion of a program that:
  - ! requires at least 2 years of college work before entrance into the program,
  - ! includes a total of at least 6 academic years of college work to complete, and
  - ! provides all remaining academic requirements to begin practice in a profession
- k. **Doctoral Degree**
- l. **Post-Doctoral Certificate**

### Revision

#### **1. REQUIRED LEVEL OF EDUCATION**

**Please indicate the level of education required to perform this job.** (Note that this does ***not*** mean the level of education that you personally have achieved.)

- G Less than a High School Diploma**
- G High School Diploma** (or GED or High School Equivalence Certificate)
- G Post-Secondary Certificate** - awarded for training completed after high school (e.g., in Personal Services, Engineering-Related Technologies, Vocational Home Economics, Construction Trades, Mechanics and Repairers, Precision Production Trades)
- G Some College Courses**
- G Associate's Degree** (or other 2-year degree)
- G Bachelor's Degree**
- G Post-Baccalaureate Certificate** - awarded for completion of an organized program of study requiring 30 credits beyond the Bachelor's degree; designed for people who have completed a Baccalaureate degree, but do not meet the requirements of academic degrees carrying the title of Master.
- G Master's Degree**
- G Post-Master's Certificate** - awarded for completion of an organized program of study requiring 60 credit hours beyond the Master's degree, but does not meet the requirements of academic degrees at the doctoral level.
- G First Professional Degree** - awarded for completion of a program that
  - ! requires at least 2 years of college work before entrance into the program,
  - ! includes a total of at least 6 academic years of work to complete, and
  - ! provides all remaining academic requirements to begin practice in a profession
- G Doctoral Degree**
- G Post-Doctoral Degree**

## Education and Training

### Original

### Revision

#### **Part 2. INSTRUCTIONAL PROGRAM REQUIRED**

Delete.

Please indicate the instructional program that is required for this job by placing an "X" next to the appropriate area.

#### **Part 3. LEVEL OF EDUCATION REQUIRED IN SPECIFIC SUBJECT AREAS**

Delete.

#### **Part 4. LICENSURE, CERTIFICATION, AND REGISTRATION**

Delete.

#### **Part 5. EXPERIENCE**

If someone were being hired to perform this job, how much of the following would be required?

- Determine the level of experience that is required for this job. Use the following scale:

0 = not applicable or none

1 = up to and including 1 month

2 = over 1 month, up to and including 3 months

3 = over 3 months, up to and including 6 months

4 = over 6 months, up to and including 1 year

5 = over 1 year, up to and including 2 years

6 = over 2 years, up to and including 4 years

7 = over 4 years, up to and including 6 years

8 = over 6 years, up to and including 8 years

9 = over 8 years, up to and including 10 years

10 = over 10 years

- Place an "X" over the most appropriate value.

## Education and Training

### Original

1. **RELATED WORK EXPERIENCE**  
(other jobs that prepared you for this job)

2. **ON-SITE OR IN-PLANT TRAINING**  
(organized classroom study provided by the employer)

### Revision

2. **If someone were being hired to perform this job, how much RELATED WORK EXPERIENCE would be required?** (That is, having other jobs that prepare the worker for the job)
- G None
  - G Up to and including 1 month
  - G Over 1 month, up to and including 3 months
  - G Over 3 months, up to and including 6 months
  - G Over 6 months, up to and including 1 year
  - G Over 1 year, up to and including 2 years
  - G Over 2 years, up to and including 4 years
  - G Over 4 years, up to and including 6 years
  - G Over 6 years, up to and including 8 years
  - G Over 8 years, up to and including 10 years
  - G Over 10 years

3. **If someone were being hired to perform this job, how much ON-SITE OR IN-PLANT TRAINING would be required?** (That is, organized classroom study provided by the employer)
- G None
  - G Up to and including 1 month
  - G Over 1 month, up to and including 3 months
  - G Over 3 months, up to and including 6 months
  - G Over 6 months, up to and including 1 year
  - G Over 1 year, up to and including 2 years
  - G Over 2 years, up to and including 4 years
  - G Over 4 years, up to and including 6 years
  - G Over 6 years, up to and including 8 years
  - G Over 8 years, up to and including 10 years
  - G Over 10 years

## Education and Training

### Original

3. **ON-THE-JOB TRAINING (OJT)**  
(serving as a learner or trainee on the job under the instruction of a more experienced worker)

4. **APPRENTICESHIP**  
(having served in a registered US Department of Labor apprenticeship program and received a certificate of completion)

### Revision

4. **If someone were being hired to perform this job, how much ON-THE-JOB TRAINING would be required?** (That is, serving as a learner or trainee on the job under instruction of a more experienced worker)

- G None
- G Up to and including 1 month
- G Over 1 month, up to and including 3 months
- G Over 3 months, up to and including 6 months
- G Over 6 months, up to and including 1 year
- G Over 1 year, up to and including 2 years
- G Over 2 years, up to and including 4 years
- G Over 4 years, up to and including 6 years
- G Over 6 years, up to and including 8 years
- G Over 8 years, up to and including 10 years
- G Over 10 years

5. **If someone were being hired to perform this job, how much APPRENTICESHIP would be required?** (That is, having served in a registered US Department of Labor apprenticeship program and received a certificate of completion)

- G None
- G Up to and including 1 month
- G Over 1 month, up to and including 3 months
- G Over 3 months, up to and including 6 months
- G Over 6 months, up to and including 1 year
- G Over 1 year, up to and including 2 years
- G Over 2 years, up to and including 4 years
- G Over 4 years, up to and including 6 years

## Work Styles

<u>Original</u>	<u>Revision</u>
<b>10. Stress Tolerance</b> Job requires accepting criticism and dealing calmly and effectively with high-stress situations.	<b>9.</b> No change.
<b>11. Adaptability/Flexibility</b> Job requires being open to change (positive or negative) and to considerable variety in the workplace.	<b>10.</b> No change.
<b>12. Dependability</b> Job requires being reliable, responsible, and dependable, and fulfilling obligations.	<b>11.</b> No change.
<b>13. Attention to Detail</b> Job requires being careful about details and thorough in completing tasks.	<b>12.</b> No change.
<b>14. Integrity</b> Job requires being honest and avoiding unethical behavior.	<b>13. Integrity (Minimal)</b> Job requires being honest and ethical.
<b>15. Independence</b> Job requires developing one's own ways of doing things, guiding oneself with little or no supervision, and depending on oneself to get things done.	<b>14.</b> No change.
<b>16. Innovation</b> Job requires creativity and alternative thinking to come up with new ideas for and answers to work-related problems.	<b>15. Innovation (Minimal)</b> Job requires creativity and alternative thinking to develop new ideas for and answers to work-related problems.
<b>17. Analytical Thinking</b> Job requires analyzing information, and using logic to address work or job issues and problems.	<b>16. Analytical Thinking (Minimal)</b> Job requires analyzing information and using logic to address work-related issues and problems.

## Skills

### Original

- 1. Reading Comprehension**  
Understanding written sentences and paragraphs in work-related documents.
- 2. Active Listening**  
Listening to what other people are saying and asking questions as appropriate.
- 3. Writing**  
Communicating effectively with others in writing as indicated by the needs of the audience.
- 4. Speaking**  
Talking to others to effectively convey information.
- 5. Mathematics**  
Using mathematics to solve problems.
- 6. Science**  
Using scientific methods to solve problems.
- 7. Critical Thinking**  
Using logic and analysis to identify the strengths and weaknesses of different approaches.
- 8. Active Learning**  
Working with new material or information to grasp its implications.

### Revision

- 1.** No change.
- 2. Active Listening (Moderate)**  
Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.
- 3. Writing (Minimal)**  
Communicating effectively in writing as appropriate for the needs of the audience.
- 4. Speaking (Minimal)**  
Talking to others to convey information effectively.
- 5.** No change.
- 6. Science (Minimal)**  
Using scientific rules and methods to solve problems.
- 7. Critical Thinking (Minimal)**  
Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.
- 8. Active Learning (Moderate)**  
Understanding the implications of new information for both current and future problem-solving and decision-making.

The modified definition is more congruent with listening skill as it is defined in the interpersonal skills literature.

## Skills

### Original

- 9. Learning Strategies**  
Using multiple approaches when learning or teaching new things.
- 10. Monitoring**  
Assessing how well one is doing when learning or doing something.
- 11. Social Perceptiveness**  
Being aware of others' reactions and understanding why they react the way they do.
- 12. Coordination**  
Adjusting actions in relation to others' actions.
- 13. Persuasion**  
Persuading others to approach things differently.
- 14. Negotiation**  
Bringing others together and trying to reconcile differences.
- 15. Instructing**  
Teaching others how to do something.
- 16. Service Orientation**  
Actively looking for ways to help people.

### Revision

- 9. Learning Strategies (Moderate)**  
Selecting and using training/instructional methods and procedures appropriate for the situation when learning or teaching new things.
- 10. Monitoring (Moderate)**  
Monitoring/Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.
- 11. Social Perceptiveness (Minimal)**  
Being aware of others' reactions and understanding why they react as they do.
- 12.** No change.
- 13. Persuasion (Minimal)**  
Persuading others to change their minds or behavior.
- 14.** No change.
- 15.** No change.
- 16.** No change.

## Skills

### Original

- 17. Problem Identification**  
Identifying the nature of problems.
- 18. Information Gathering**  
Knowing how to find information and identifying essential information.
- 19. Information Organization**  
Finding ways to structure or classify multiple pieces of information.
- 20. Synthesis/Reorganization**  
Reorganizing information to get a better approach to problems or tasks.
- 21. Idea Generation**  
Generating a number of different approaches to problems.
- 22. Idea Evaluation**  
Evaluating the likely success of an idea in reaction to the demands of the situation.
- 23. Implementation Planning**  
Developing approaches for implementing an idea.
- 24. Solution Appraisal**  
Observing and evaluating the outcomes of a problem solution to identify lessons learned or redirect efforts.
- 25. Operations Analysis**  
Analyzing needs and product requirements to create a design.
- 26. Technology Design**  
Generating or adapting equipment and technology to serve user needs.
- 27. Equipment Selection**  
Determining the kind of tools and equipment needed to do a job.
- 28. Installation**  
Installing equipment, machines, wiring, or programs to meet specifications.
- 29. Programming**  
Writing computer programs for various purposes.

### Revision

- 17. Complex Problem Solving**  
(Combination of original items 17-24)  
Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.

- |            |            |
|------------|------------|
| <b>18.</b> | No change. |
| <b>19.</b> | No change. |
| <b>20.</b> | No change. |
| <b>21.</b> | No change. |
| <b>22.</b> | No change. |

## Skills

### Original

- 30. Testing**  
Conducting tests to determine whether equipment, software, or procedures are operating as expected.
- 33. Product Inspection**  
Inspecting and evaluating the quality of products.
- 31. Operation Monitoring**  
Watching gauges, dials, or other indicators to make sure a machine is working properly.
- 32. Operation and Control**  
Controlling operations of equipment or systems.
- 34. Equipment Maintenance**  
Performing routine maintenance and determining when and what kind of maintenance is needed.
- 35. Troubleshooting**  
Determining what is causing an operating error and deciding what to do about it.
- 36. Repairing**  
Repairing machines or systems using the needed tools.
- 37. Visioning**  
Developing an image of how a system should work under ideal conditions.
- 38. Systems Perceptions**  
Determining when important changes have occurred in a system or are likely to occur.
- 39. Identification of Downstream Consequences**  
Determining the long-term outcomes of a change in operations.

### Revision

- 23. Quality Control Analysis** (Combination of original items 30 and 33)  
Conducting tests and inspections of products, services, or processes to evaluate quality or performance.
- 24. Operations Monitoring** (Minimal)  
Watching gauges, dials, or other indicators to make sure a machine is working properly.
- 25.** No change.
- 26. Equipment Maintenance** (Minimal)  
Performing routine maintenance on equipment and determining when and what kind of maintenance is needed.
- 27. Troubleshooting** (Minimal)  
Determining causes of operating errors and deciding what to do about it.
- 28.** No change.
- 29. Systems Analysis** (Combination of original items 37-39)  
Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.

## Skills

### Original

- 40. Identification of Key Causes**  
Identifying the things that must be changed to achieve a goal.
- 42. Systems Evaluation**  
Looking at many indicators of system performance, taking into account their accuracy.
- 41. Judgment and Decision Making**  
Weighing the relative costs and benefits of a potential action.
- 43. Time Management**  
Managing one's own time and the time of others.
- 44. Management of Financial Resources**  
Determining how money will be spent to get the work done, and accounting for these expenditures.
- 45. Management of Material Resources**  
Obtaining and seeing to the appropriate use of equipment, facilities, and materials needed to do certain work.
- 46. Management of Personnel Resources**  
Motivating, developing, and directing people as they work, identifying the best people for the job.

### Revision

- 30. Systems Evaluation** (Combination of original items 40 and 42)  
Identifying measures or indicators of system performance and the actions needed to improve or correct performance, relative to the goals of the system.
- 31. Judgment and Decision Making (Minimal)**  
Considering the relative costs and benefits of potential actions to choose the most appropriate one.
- 32.** No change.
- 33.** No change.
- 34.** No change.
- 35.** No change.

| 3. Objectivity vs. Subjectivity of Information Communicated.<br>How objective or subjective is the information communicated in this job? | Delete.   |

## Work Context

### Original

4. Job Required Social Interaction.  
How much does this job require the worker to be in contact (face-to-face, by telephone, or otherwise) with others in order to perform it?
5. Privacy of Communications.  
To what extent can an individual's work materials and communications (face-to-face, phone, fax, E-mail, etc.) be monitored by others?
6. Job Interactions.  
  
How important are interactions requiring the worker to:
  - a. Supervise, coach, train, or develop other employees?
  - b. Persuade someone to a course of action (informally) or influence others to buy something (to sell)?
  - c. Provide a service to others (e.g., customers)?
  - d. Take a position opposed to coworkers or others?
  - e. Work with or contribute to a work group or team to perform this job?
  - f. Deal with external customers (e.g., retail sales) or the public in general (e.g., police work)?

### Revision

6. How much contact with others (by telephone, face-to-face, or otherwise) is required to perform *your current job*?
- Delete.
- Delete.
- Delete.
- Delete.
7. How important are interactions that require you to work with or contribute to a work group or team to perform *your current job*?
8. In *your current job*, how important are interactions that require you to deal with external customers (as in retail sales) or the public in general (as in police work)?

## Work Context

### Original

- g. Coordinate or lead others in accomplishing work activities (not supervision)?
- 7. Responsibility for Others' Health and Safety. How responsible is the worker for others' health and safety on this job?
- 8. Responsibility for Work Outcomes and Results. How responsible is the worker for work outcomes and results of other workers?
- 9. How frequently do the job requirements place the worker in conflict situations?
- 10. How frequently does the worker have to deal with unpleasant, angry, or discourteous individuals as part of the job requirements?
- 11. How frequently does this job require the worker to deal with physical aggression of violent individuals?
- 12. Work Setting. How frequently does this job require the worker to work:
  - a. Indoors, environmentally controlled?
  - b. Indoors, not environmentally controlled (e.g., warehouse without air conditioning)?
  - c. Outdoors, exposed to all weather conditions?

### Revision

- 9. ***In your current job, how important are interactions that require you to coordinate or lead others in accomplishing work activities? (not as a supervisor or team leader)***
- 10. ***How responsible are you for the health and safety of other workers on your current job?***
- 11. ***How responsible are you for work outcomes and results of other workers on your current job?***
- 12. ***How often are conflict situations a part of your current job?***
- 13. ***How often is dealing with unpleasant, angry or discourteous people a part of your current job?***
- 14. ***How often is dealing with violent or physically aggressive people a part of your current job?***
- 15. ***How often does your current job require you to work indoors in an environmentally controlled environment (like a warehouse with air conditioning)?***
- 16. ***How often does your current job require you to work in an environment that is not environmentally controlled (like a warehouse without air conditioning)?***
- 17. ***How often does your current job require you to work outdoors, exposed to all weather conditions?***

## Work Context

### Original

- d. Outdoors, under cover (e.g., open shed)?
  - e. In an open vehicle or operating open equipment (e.g., tractor)?
  - f. In an enclosed vehicle or operating enclosed equipment (e.g., automobile)?
13. Privacy of Work Area.  
How private is the work area for this job?
14. Physical Proximity.  
To what extent does this job require the worker to perform job tasks in close physical proximity to other people?
15. Environmental Conditions.  
How often during a usual work period is the worker exposed to the following conditions:
- a. Sounds and noise levels that are distracting and uncomfortable?
  - b. Very hot (above 90° F) or very cold (under 32° F) temperatures?
  - c. Extremely bright or inadequate lighting conditions?
  - d. Contaminants (pollutants, gases, dust, odors, etc.)?
  - e. Cramped work space that requires getting into awkward positions?

### Revision

18. How often does *your current job* require you to work outdoors, under cover (like in an open shed)?
19. How often does *your current job* require you to work in an open vehicle or operating equipment (like a tractor)?
20. How often does *your current job* require you to work in a closed vehicle or operate enclosed equipment (like a car)?
- Delete.
21. How physically close to other people are you when you perform *your current job*?
22. In *your current job*, how often are you exposed to sounds and noise levels that are distracting and uncomfortable?
23. In *your current job*, how often are you exposed to very hot (above 90° F) or very cold (under 32° F) temperatures?
24. In *your current job*, how often are you exposed to extremely bright or inadequate lighting conditions?
25. In *your current job*, how often are you exposed to contaminants (such as pollutants, gases, dust or odors)?
26. In *your current job*, how often are you exposed to cramped work space that requires getting into awkward positions?

## Work Context

### Original

- f. Whole body vibration (e.g., operating a jackhammer or earth-moving equipment)?
- 16. Exposure to Radiation.
  - a. Frequency. How often does this job require the worker to be exposed to radiation?
  - b. Likelihood of Injury. What is the likelihood that the worker would be injured as a result of being exposed to radiation while performing this job?
  - c. Degree of Injury. If injury, due to exposure to radiation, were to occur while performing this job, how serious would be the likely outcome?
- 17. Exposure to Diseases/Infections (e.g., patient care, some laboratory work, sanitation control, etc.)
  - a. Frequency. How often does this job require the worker to be exposed to diseases/infections?
  - b. Likelihood of Injury. What is the likelihood that the worker would be injured as a result of being exposed to diseases/infections while performing this job?
  - c. Degree of Injury. If injury, due to exposure to diseases/infections, were to occur while performing this job, how serious would be the likely outcome?

| <br>  |   |
| 23. Work Attire.<br>How often does the worker wear:   |   |
| a. Business clothes, such as neckties and dresses that are often worn in offices?                       | Delete.   |
| b. A special uniform, such as that of a commercial pilot, nurse, police officer, or military personnel? | Delete.   |
| c. Work clothing such as that worn by production or maintenance workers?                                | Delete.   |

## Work Context

### Original

- d. Common protective or safety attire, such as safety shoes, glasses, gloves, hearing protection, hard-hat, or personal flotation device?
  - e. Specialized protective or safety attire, such as a breathing apparatus, safety harness, full protection suit, or radiation protection?
24. Consequences of Error.  
How serious would the result usually be if the worker made a mistake that was not readily correctable?
25. Impact of Decisions.
- a. Level  
What results do the worker's decision usually have on other people, the financial resources, and/or the image or reputation of the organization?
  - b. Frequency  
How frequently is the worker required to make decisions that affect other people, the financial resources, and/or the image and reputation of the organization?
26. Responsibility/Accountability.  
To what extent is this job assigned accountability for final work outcomes or results?
27. Decision Latitude.  
Indicate the amount of freedom the worker has to make decisions without supervision.

### Revision

43. ***In your current job, how often do you wear common protective or safety equipment such as safety shoes, glasses, gloves, hearing protection, hard hats, or life jackets?***
44. ***In your current job, how often do you wear specialized protective or safety equipment, such as breathing apparatus, safety harness, full protection suits, or radiation protection?***
45. ***How serious a mistake can you make on your current job (one you can't easily correct)?***
46. ***In your current job, what results do your decisions usually have on other people or the image or reputation or financial resources of your employer?***
47. ***In your current job, how often do your decisions affect other people or the image or reputation or financial resources of your employer?***
- Delete.
48. ***In your current job, how much freedom do you have to make decisions without supervision?***

## **Appendix C**

**Listing of O\*NET Data Dictionary Variables  
in the Prototype and Current Versions  
with Indications of:**

**Changes in Definition or Formatting  
and  
the Sources of the Data in the O\*NET Database**

## LEGEND

### Column Heading

<b>Row #</b>	Row number (used for cross-references within the table)
<b>DD Var_Name</b>	O*NET Data Dictionary Variable Name (e.g., A01LV00M)
<b>Key</b>	Content Model Key (e.g., I.A.1.a.1)
<b>Element Label</b>	Content Model Element Label (e.g., Oral Comprehension)
<b>Scale Label</b>	Content Model Scale Label (e.g., Level)
<b>A</b>	1=Item has been Deleted, 0 = Item has not been Deleted
<b>B</b>	1 = No change in item name, definition, Stem, Anchor or Scale, 0=Item Changed
<b>C</b>	1 = Change in wording of item Name, 0 = No Change
<b>D</b>	Change in wording of item Definition (0 = No change, 1 = Minimal Change, 2 = Moderate Change)
<b>E</b>	1 = Any Change in wording of question Stem, 0 = No Change,
<b>F</b>	1 = Any Change in Scale Anchors, 0 = No Change {changes involve wording and location of anchors}
<b>G</b>	1 = Any Change in Scale Formatting, 0 = No Change {changes generally involve changing the number of scale points}
<b>H</b>	1 = New variable - Not a roll-up, 0 = Not a new variable
<b>I</b>	1 = Variable created as roll-up {Content of several previous items included in another item}, 0 = Not a New Variable
<b>J</b>	1 = Variable Eliminated: now part of roll-up {Item content included with content of other items in a single question}, 0 = Not Rolled-up
<b>K</b>	1 = Analyst data available in O*NET 98, 0 = No Analyst data available in O*NET 98
<b>L</b>	1 = Incumbent data collected in Survey Pretest, 0 = No Incumbent data collected in Survey Pretest

For those spreadsheet cells where a 1 indicates a roll-up -- a parenthetical number (or set of numbers) appears inside that cell indicating the row number or numbers of the rolled-up descriptors

For those cells where a 1 indicates that a item has been rolled-up, then parenthetical numbers indicate table row of variable now containing the item content

New variables (including those created by a roll-up) have no content model key until the model has been updated to accommodate them

**Level** \* Indicates that the O\*NET 98 LEVEL question was changed in several ways in the O\*NET Survey Pretest (in this questionnaire):

- ! The order of the LEVEL and IMPORTANCE questions was reversed, with LEVEL question asked after the IMPORTANCE question in the Survey Pretest
- ! The NR (Not Relevant) answer was deleted from the LEVEL question and offered as a Not Important option for corresponding IMPORTANCE questions
- ! The LEVEL question was changed from a vertical scale to a horizontal scale
- ! The ends of the level scales from the prototype instruments were anchored by either examples of extreme levels or the words HIGH and LOW. These have been eliminated and the words "highest level" are placed under the number 7 for each scale

**Importance** \* Indicates that the O\*NET 98 IMPORTANCE question was changed in several ways in the O\*NET Survey Pretest (in this questionnaire):

- ! The order of the LEVEL and IMPORTANCE questions was reversed, with LEVEL question asked after the IMPORTANCE question in the Survey Pretest
- ! When variable rated NOT IMPORTANT, the Level question for that variable is skipped
- ! When variable rated NOT IMPORTANT, the Level question for that variable is skipped
